## KAlgebra

- Mathematical Calculator based on MathML language
- Capable of making arithmetic and logical operations
- Helps in representing 2D and 3D graphs

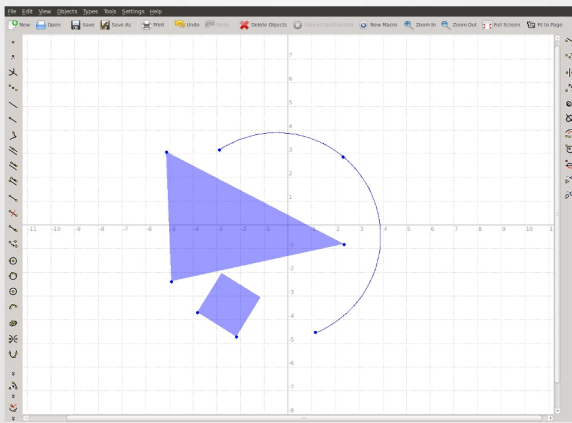

KGeography

- Geography learning utility
- Ability to browse maps
- Includes games which helps the learning process

Step

- Interactive physical simulator
- Collection of example experiments and tutorials
- Tools to visualize results

Kig

- Utility for drawing mathematical figures
- Ability to include the drawings in other documents
- Tools for both regular and arbitrary figures

KStars

- Accurate graphical simulation of the night sky
- Default, extra and downloadable catalogs
- Features for educators, students and amateur astronomers

Kalzium

- Digital representation of the Periodic Table of Elements
- Tools to visualize each element
- Equation solver for problems and filetype conversion
