

# Package ‘pRolocGUI’

April 23, 2016

**Title** Interactive visualisation of spatial proteomics data

**Version** 1.4.1

**Author** Thomas Naake and Laurent Gatto, with contributions from  
Lisa M Breckels

**Maintainer** Laurent Gatto <lg390@cam.ac.uk>,  
Thomas Naake <naake@stud.uni-heidelberg.de>

**Description** The package pRolocGUI comprises functions to  
interactively visualise organelle (spatial) proteomics  
data on the basis of pRoloc, pRolocdata and shiny.

**Depends** R (>= 3.1.0), pRoloc (>= 1.5.12), MSnbase (>= 1.13.11),  
methods

**Imports** pRolocdata, shiny (>= 0.9.1), tools (>= 3.1.0), scales, DT

**Suggests** RUnit, BiocGenerics, knitr, knitrBootstrap, bibtex,  
knitcitations (>= 1.0-1)

**License** GPL-2

**URL** <http://ComputationalProteomicsUnit.github.io/pRolocGUI/>

**BugReports** <https://github.com/ComputationalProteomicsUnit/pRolocGUI/issues>

**VignetteBuilder** knitr

**Video** <https://www.youtube.com/playlist?list=PLvIXxpatSLA2loV5Srs2VBpJIYUIVJ4ow>

**biocViews** Proteomics, Visualization, GUI

**NeedsCompilation** no

`plotMat2D`      *Plot a matrix of markers*

### Description

Shiny App for visualising a matrix of markers

### Usage

```
plotMat2D(object, fcol = "Markers", ncol., ...)
```

### Arguments

<code>object</code>	An instance of class <code>MSnSet</code> .
<code>fcol</code>	The name of the markers matrix. Default is "Markers".
<code>ncol.</code>	Number of columns to be used for the legend. The default value (4 or less) depends on the length of the labels. Reduce this if the labels are too long and the legend does not fit in the display panel.
<code>...</code>	Additional parameters that can be used to choose the dimensionality reduction method, as defined in <code>plot2D</code> .

### Author(s)

Lisa M Breckels

### Examples

```
library("pRoloc")
library("pRolocdata")
data(dunkley2006)
## adds matrix markers
dunkley2006 <- mrkVecToMat(dunkley2006)
if (interactive())
  plotMat2D(dunkley2006)
```

`pRolocComp`      *pRolocVis/pRolocComp*

### Description

`pRolocVis` and `pRolocComp` launch shiny sessions to interactively analyse and visualise proteomics data.

**Usage**

```
pRolocComp(object, method = "PCA")  
  
pRolocVis(object, method = "PCA")
```

**Arguments**

object	an object of class MSnSet or a list of MSnSets (pRolocVis), a list of length 2 of MSnSets (pRolocComp).
method	The method to be used for dimensionality reduction. Default is "PCA". See plot2D for details.

**Details**

`pRolocVis` is a function to start a shiny session with one MSnSet data set or a list of MSnSets. `pRolocComp` launches with a list of two MSnSets.

The functions allow to explore and analyse interactively spatial proteomics data, especially LOPIT and PCP experiments. Both functions offer high interactivity for exploring Principle Component Analysis (PCA) plots, protein profile plots and quantitative and qualitative meta-data. Additionally, `pRolocVis` and `pRolocComp` support import/export abilities for past and new search results using the `FeaturesOfInterest/FoICollection` infrastructure defined in the `MSnbase` package.

`pRolocVis` enables to analyse one MSnSet at a time, while `pRolocComp` analyses and compares two MSnSets. `pRolocComp` is especially meant for analyses of data which looks at the change of proteins in protein localisation.

To load the vignette for the functions `pRolocVis` and `pRolocGUI` enter `vignette("pRolocGUI")` in the console. The vignette will give more information on how to use the shiny applications.

**Value**

An object `pRolocGUI_SearchResults` of class `FoICollection` when the object existed already or when a new `FoICollection` was created during a session.

**Author(s)**

Thomas Naake <naake@stud.uni-heidelberg.de>

**Examples**

```
## load MSnSet data sets from the pRolocdata package  
data(andy2011, package = "pRolocdata")  
data(tan2009r1, package = "pRolocdata")  
data(tan2009r2, package = "pRolocdata")  
data(dunkley2006, package = "pRolocdata")  
  
## create lists with unnamed and named objects  
unnamedVis <- list(andy2011, tan2009r1, dunkley2006)  
namedVis <- list(andy2011 = andy2011,  
                  tan2009r1 = tan2009r1,  
                  dunkley2006 = dunkley2006)
```

```

unnamedComp <- list(tan2009r1, tan2009r2)
namedComp <- list(tan2009r1 = tan2009r1,
                  tan2009r2 = tan2009r2)

## launch application by either assigning a MSnSet,
## an unnamed or a named list to the argument object
if (interactive()) {
  pRolocVis(object = andy2011)
  pRolocVis(object = unnamedVis)
  pRolocVis(object = namedVis)
  pRolocComp(object = unnamedComp)
  pRolocComp(object = namedComp)
}

```

**pRolocVis2***Visualise your pRoloc data***Description**

pRoloc interactive visualisation

**Usage**

```
pRolocVis2(object, fcol, foi, fig.height = "600px", fig.width = "100%",
            legend.width = "100%", legend.cex = 1, nchar = 15, all = FALSE, ...)
```

**Arguments**

<code>object</code>	An instance of class <code>MSnSet</code> .
<code>fcol</code>	The name of the markers matrix (default is "Markers"). Can be missing if <code>foi</code> is available.
<code>foi</code>	A <a href="#">FeaturesOfInterest</a> or a <a href="#">FoICollection</a> , that will be available for display.
<code>fig.height</code>	Height of the figure. Default is "600px".
<code>fig.width</code>	Width of the figure. Default is "600px".
<code>legend.width</code>	Width of the legend. Default is "100%".
<code>legend.cex</code>	Character expansion for the vignette labels. Default is 1.
<code>nchar</code>	Maximum number of characters if the markers class names, before their names are truncated. Default is 10.
<code>all</code>	If there are more than 10 clusters, only the first three are displayed on start-up, unless <code>all</code> is set to TRUE. Default is FALSE.
<code>...</code>	Additional parameters that can be used to choose the dimentionality reduction method, as defined in <a href="#">plot2D</a> .

Laurent Gatto

## Examples

```
library("pRoloc")
library("pRolocdata")
data(dunkley2006)
## markers matrix ecoding
dunkley2006 <- mrkVecToMat(dunkley2006)
## order the fractions
dunkley2006 <- dunkley2006[, order(dunkley2006$fraction)]
if (interactive())
  pRolocGUI:::pRolocVis2(dunkley2006)
```
