

# Package ‘MSMB’

July 15, 2025

**Title** Data sets for the book 'Modern Statistics for Biology'

**Version** 1.27.0

**Author** Wolfgang Huber, Andrzej Oles, Mike Smith

**Description** Data sets for the book 'Modern Statistics for Modern Biology',  
S.P. Holmes and W. Huber.

**Maintainer** Wolfgang Huber <wolfgang.huber@embl.org>

**License** LGPL

**Depends** R (>= 3.5), tibble

**Suggests** knitr, BiocStyle

**VignetteBuilder** knitr

**biocViews** ExperimentData

**git\_url** <https://git.bioconductor.org/packages/MSMB>

**git\_branch** devel

**git\_last\_commit** 0b08090

**git\_last\_commit\_date** 2025-04-15

**Repository** Bioconductor 3.22

**Date/Publication** 2025-07-15

brcalymphnode	<i>Coordinates and cell types in a histopathology slide of a breast cancer patient's lymph node</i>
---------------	---

---

## Description

Coordinates and cell types in a histopathology slide of a breast cancer patient's lymph node.

**Usage**

```
data("brcalymphnode")
```

**Format**

A `data.frame`.

**Details**

This dataset is used as an example in the 'Image data' chapter. See there for more details about it.

**Examples**

```
data("brcalymphnode")
plot(x = brcalymphnode$x, y = brcalymphnode$y, pch = ".", col = brcalymphnode$class)
```

`ukraine_dists`

*Coordinates of and pairwise distances between hero cities and oblast capitals in Ukraine*

**Description**

This dataset is used as an example in the 'Multivariate methods for heterogeneous data' chapter.

**Usage**

```
data("ukraine_dists")
data("ukraine_coords")
```

**Format**

`ukraine_dists` is an object of S3 class `dist`. `ukraine_coords` is a `tibble`.

**Details**

The two datasets were constructed using the R code in the file 'ukraine-dists.R' in the 'scripts' directory of this package. Briefly, the city and place names are hardcoded in the script, coordinates were queried from OpenStreetMap using the `geo` function in the `tidygeocoder`, and pairwise geodesic distances computed using the `geodist` function from the eponymous package.

**Examples**

```
data("ukraine_coords")
plot(x = ukraine_coords$lon, y = ukraine_coords$lat, pch = 16, cex = 0.7, col = "#0057b7", asp = 1 / cos(pi / 180 * ukraine_coords$lon))
text(x = ukraine_coords$lon, y = ukraine_coords$lat, labels = ukraine_coords$city, adj = c(0.5, -0.2))
```
