

Package ‘WGSmapp’

July 17, 2025

Type Package
Title Mappability tracks of Whole-genome Sequencing from the ENCODE Project
Version 1.21.0
Author Rujin Wang
Maintainer Rujin Wang <rujin@email.unc.edu>

Description
This package provides whole-genome mappability tracks on human hg19/hg38 assembly. We employed the 100-mers mappability track from the ENCODE Project and computed weighted average of the mappability scores if multiple ENCODE regions overlap with the same bin. “Black-list” bins, including segmental duplication regions and gaps in reference assembly from telomere, centromere, and/or heterochromatin regions are included. The dataset consists of three assembled .bam files of single-cell whole genome sequencing from 10X for illustration purposes.

Contents

mapp_hg19	2
mapp_hg38	2
Index	3

mapp_hg19

GRanges with mappability scores for hg19

Description

GRanges of mappability track for 100-mers on the GRCh37/hg19 human reference genome from ENCODE.

Usage

mapp_hg19

Format

A GRanges object with 21591667 ranges and mappability scores

mapp_hg38

GRanges with mappability scores for hg38

Description

Use liftOver utility to convert hg19 coordinates to hg38

Usage

mapp_hg38

Format

A GRanges object with 21584930 ranges and mappability scores
