

# Package ‘autonomics’

July 2, 2025

**Type** Package

**Title** Unified Statistical Modeling of Omics Data

**Version** 1.16.0

**Description** This package unifies access to Statistical Modeling of Omics Data.

Across linear modeling engines (lm, lme, lmer, limma, and wilcoxon).

Across coding systems (treatment, difference, deviation, etc).

Across model formulae (with/without intercept, random effect, interaction or nesting).

Across omics platforms (microarray, rnaseq, msproteomics, affinity proteomics, metabolomics).

Across projection methods (pca, pls, sma, lda, spls, opls).

Across clustering methods (hclust, pam, cmeans).

It provides a fast enrichment analysis implementation.

And an intuitive contrastogram visualisation to summarize contrast effects in complex designs.

**License** GPL-3

**Encoding** UTF-8

**LazyData** true

**VignetteBuilder** knitr

**biocViews** Software, DataImport, Preprocessing, DimensionReduction,  
PrincipalComponent, Regression, DifferentialExpression,  
GeneSetEnrichment, Transcriptomics, Transcription,  
GeneExpression, RNASeq, Microarray, Proteomics, Metabolomics,  
MassSpectrometry,

**BugReports**

<https://gitlab.uni-marburg.de/fb20/ag-graumann/software/autonomics/issues>

**RoxygenNote** 7.3.1

**Depends** R (>= 4.0)

**Imports** abind, BiocFileCache, BiocGenerics, bit64, cluster,  
codingMatrices, colorspace, data.table, dplyr, edgeR, ggforce,  
ggplot2, ggrepel, graphics, grDevices, grid, gridExtra, limma,  
magrittr, matrixStats, methods, MultiAssayExperiment, parallel,  
RColorBrewer, rlang, R.utils, readxl, S4Vectors, scales, stats,  
stringi, SummarizedExperiment, survival, tidyr, tidyselect,  
tools, utils, vsn

**Suggests** affy, AnnotationDbi, AnnotationHub, apcluster, Biobase, BiocManager, BiocStyle, Biostrings, coin, diagram, DBI, e1071, ensemblDb, GenomicDataCommons, GenomicRanges, GEOquery, ggtext, hgu95av2.db, ICSNP, jsonlite, knitr, lme4, lmerTest, MASS, patchwork, mixOmics, mpm, nlme, OlinkAnalyze, org.Hs.eg.db, org.Mm.eg.db, pcaMethods, pheatmap, progeny, propagate, RCurl, RSQLite, remotes, rmarkdown, ropis, Rsubread, readODS, rtracklayer, statmod, testthat, UniProt.ws, writexl, XML

**git\_url** <https://git.bioconductor.org/packages/autonomics>

**git\_branch** RELEASE\_3\_21

**git\_last\_commit** a47f4df

**git\_last\_commit\_date** 2025-04-15

**Repository** Bioconductor 3.21

**Date/Publication** 2025-07-02

**Author** Aditya Bhagwat [aut, cre],  
Richard Cotton [ctb],  
Shahina Hayat [ctb],  
Laure Cougnaud [ctb],  
Witold Szymanski [ctb],  
Vanessa Beutgen [ctb],  
Willem Ligtenberg [ctb],  
Hinrich Goehlmann [ctb],  
Karsten Suhre [ctb],  
Johannes Graumann [aut, sad]

**Maintainer** Aditya Bhagwat <[aditya.bhagwat@uni-marburg.de](mailto:aditya.bhagwat@uni-marburg.de)>

|        |                                |
|--------|--------------------------------|
| .coxph | <i>Fit onefeature survival</i> |
|--------|--------------------------------|

---

## Description

Fit onefeature survival

## Usage

```
.coxph(timetoevent, event, expr)

.survdiff(timetoevent, event, expr)

.logrank(timetoevent, event, expr)
```

## Arguments

|             |                                                                |
|-------------|----------------------------------------------------------------|
| timetoevent | numeric (time to event)                                        |
| event       | numeric (1=event, 0=not)                                       |
| expr        | numeric (.coxph) or twolevel-factor (.survdiff, .logrank_test) |

## Examples

```
# Prepare
  object <- survival_example()
  timetoevent <- object$timetoevent
  event <- object$event
  expr <- values(object)[1,]
  quantile <- factor(dplyr::ntile(expr, 2))
# Survival
  .coxph(timetoevent, event, expr)
  .survdiff(timetoevent, event, quantile)
  .logrank(timetoevent, event, quantile)
# Sumexp
  fit_survival(object)
```

---

|                     |                                     |
|---------------------|-------------------------------------|
| .extract_p_features | <i>Extract coefficient features</i> |
|---------------------|-------------------------------------|

---

## Description

Extract coefficient features

**Usage**

```
.extract_p_features(  
  object,  
  coefs,  
  p = 0.05,  
  fit = fits(object),  
  combiner = "|",  
  features = NULL,  
  verbose = TRUE  
)  
  
.extract_fdr_features(  
  object,  
  coefs,  
  fdr = 0.05,  
  fit = fits(object),  
  combiner = "|",  
  features = NULL,  
  verbose = TRUE  
)  
  
.extract_effectsize_features(  
  object,  
  coefs,  
  effectsize = 1,  
  fit = fits(object),  
  combiner = "|",  
  features = NULL,  
  verbose = TRUE  
)  
  
.extract_sign_features(  
  object,  
  coefs,  
  sign,  
  fit = fits(object)[1],  
  combiner = "|",  
  features = NULL,  
  verbose = TRUE  
)  
  
.extract_n_features(  
  object,  
  coefs,  
  combiner = "|",  
  n,  
  fit = fits(object)[1],  
  features = NULL,
```

```

    verbose = TRUE
  )

  extract_coef_features(
    object,
    fit = fits(object)[1],
    coefs = autonomics::coefs(object, fit = fit),
    combiner = "|",
    decreasing = FALSE,
    p = 1,
    fdr = 1,
    effectsize = 0,
    sign = c(-1, +1),
    n = 4,
    features = NULL,
    verbose = TRUE
  )

```

### Arguments

|                         |                                                       |
|-------------------------|-------------------------------------------------------|
| <code>object</code>     | SummarizedXExperiment                                 |
| <code>coefs</code>      | subset of <code>coefs(object)</code>                  |
| <code>p</code>          | p threshold                                           |
| <code>fit</code>        | subset of <code>fits(object)</code>                   |
| <code>combiner</code>   | ' ' or '&': how to combine multiple fits/coefs        |
| <code>features</code>   | features to include no matter what (character vector) |
| <code>verbose</code>    | TRUE or FALSE                                         |
| <code>fdr</code>        | fdr threshold                                         |
| <code>effectsize</code> | effectsize threshold                                  |
| <code>sign</code>       | effect sign                                           |
| <code>n</code>          | number of top features (Inf means all)                |
| <code>decreasing</code> | TRUE or FALSE                                         |

### Value

SummarizedExperiment

```

---

*.merge**Clean Merge*

---

## Description

Clean Merge

## Usage

```
.merge(dt1, dt2, by)
```

## Arguments

|     |            |
|-----|------------|
| dt1 | data.table |
| dt2 | data.table |
| by  | string     |

## Examples

```

require(data.table)
dt1 <- data.table(feature_id = c('PG1', 'PG2'), gene = c('G1', 'G2'))
dt2 <- data.table(feature_id = c('PG1', 'PG2'), protein = c('P1', 'P2'))
dt1 %<>% .merge(dt2, by = 'feature_id')
dt1

```

---

.read\_compounddiscoverer

*Read compound discoverer files as-is*

---

### Description

Read compound discoverer files as-is

### Usage

```
.read_compounddiscoverer(  
  file,  
  quantity = guess_compounddiscoverer_quantity(file),  
  colname_format = NULL,  
  mod_extract = NULL,  
  verbose = TRUE  
)
```

### Arguments

|                |                                               |
|----------------|-----------------------------------------------|
| file           | compound discoverer file                      |
| quantity       | string                                        |
| colname_format | function to reformat column names             |
| mod_extract    | function to extract MS modi from sample names |
| verbose        | TRUE / FALSE                                  |

### Value

data.table

---

.read\_compounddiscoverer\_masslist

*Read compound discoverer masslist files as-is*

---

### Description

Read compound discoverer masslist files as-is

### Usage

```
.read_compounddiscoverer_masslist(file, verbose = TRUE)
```

**Arguments**

|         |                                   |
|---------|-----------------------------------|
| file    | compound discoverer masslist file |
| verbose | TRUE / FALSE                      |

**Value**

data.table

---

*.read\_diann\_precursors*

*Read diann*

---

**Description**

Read diann

**Usage**

```
.read_diann_precursors(file, Lib.PG.Q = 0.01, verbose = TRUE)
```

```
.read_diann_proteingroups(file, Lib.PG.Q = 0.01)
```

```
read_diann_proteingroups(
  file,
  Lib.PG.Q = 0.01,
  simplify_snames = TRUE,

  block = NULL,
  coefs = NULL,
  contrasts = NULL,
  palette = NULL,
  verbose = TRUE
)
```

```
read_diann(...)
```

**Arguments**

|          |                   |
|----------|-------------------|
| file     | 'report.tsv' file |
| Lib.PG.Q | Lib.PG.Q cutoff   |

|                              |                                                              |
|------------------------------|--------------------------------------------------------------|
| <code>verbose</code>         | TRUE or FALSE                                                |
| <code>simplify_snames</code> | TRUE or FALSE: simplify (drop common parts in) samplenames ? |
| <code>rm_contaminants</code> | TRUE or FALSE: rm contaminants ?                             |
| <code>impute</code>          | TRUE or FALSE: impute group-specific NA values ?             |
| <code>plot</code>            | TRUE or FALSE                                                |
| <code>pca</code>             | TRUE or FALSE: run pca ?                                     |
| <code>pls</code>             | TRUE or FALSE: run pls ?                                     |
| <code>fit</code>             | model engine: 'limma', 'lm', 'lme(r)', 'wilcoxon' or NULL    |
| <code>formula</code>         | model formula                                                |
| <code>block</code>           | model blockvar: string or NULL                               |
| <code>coefs</code>           | model coefficients of interest: character vector or NULL     |
| <code>contrasts</code>       | coefficient contrasts of interest: character vector or NULL  |
| <code>palette</code>         | color palette: named string vector                           |
| <code>...</code>             | used to maintain deprecated functions                        |

**Value**

data.table or SummarizedExperiment

**Examples**

```
# Read
file <- download_data('dilution.report.tsv')
.read_diann_precursors(file)      # precursors longdt

|---------------|----------------------|
| add_facetvars | <i>Add facetvars</i> |
|---------------|----------------------|

---

**Description**

Add facetvars

**Usage**

```
add_facetvars(
  object,
  fit = fits(object)[1],
  coefs = autonomics::coefs(object, fit = fit)
)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| fit    | string               |
| coefs  | string vector        |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file, fit = 'limma')
object %<>% add_adjusted_pvalues()
fdt(object)
fdt(add_facetvars(object))
```

---

```
add_opentargets_by_uniprot
```

*Add opentargets annotations*

---

**Description**

Add opentargets annotations

**Usage**

```
add_opentargets_by_uniprot(
  object,
  cols = c("genesymbol", "genename", "function"),
  verbose = TRUE
)
```

**Arguments**

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| cols    | character vector     |
| verbose | TRUE or FALSE        |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
object %<>% add_opentargets_by_uniprot()
```

---

```
add_psp
```

*Add psp*

---

**Description**

Add PhosphoSitePlus literature counts

**Usage**

```
add_psp(
  object,
  pspfile = file.path(R_user_dir("autonomics", "cache"), "phosphositeplus",
    "Phosphorylation_site_dataset.gz")
)
```

**Arguments**

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| pspfile | phosphositeplus file |

**Details**

Go to [www.phosphosite.org](http://www.phosphosite.org)  
Register and Login.  
Download [Phosphorylation\\_site\\_dataset.gz](#).  
Save into: `file.path(R_user_dir('autonomics','cache'),'phosphositeplus')`

**Value**

SummarizedExperiment

**Examples**

```
fosfile <- system.file('extdata/billing19.phosphosites.txt', package = 'autonomics')
profile <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_phosphosites(fosfile = fosfile, profile = profile)
fdt(object)
object %<>% add_psp()
fdt(object)
```

---

add\_smiles

*Add smiles*

---

**Description**

Add smiles

**Usage**

```
add_smiles(object)
```

**Arguments**

|        |                                          |
|--------|------------------------------------------|
| object | character/factor vector with pubchem ids |
|--------|------------------------------------------|

**Value**

character/factor vector

**References**

<https://pubchemdocs.ncbi.nlm.nih.gov/pug-rest-tutorial>

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
# add_smiles(object[1:10, ]) # seems down
```

---

altenrich

---

*Alternative Enrichment Analysis*

---

**Description**

Alternative Enrichment Analysis

**Usage**

```
altenrich(
  object,
  pathwaydt,
  genevar = "gene",
  genesep = "[ ,;]",
  coef = autonomics::coefs(object)[1],
  fit = fits(object)[1],
  significancevar = "p",
  significance = 0.05,
  effectsizesize = 0,
  n = 3,
  genes = FALSE,
  verbose = TRUE
)
```

**Arguments**

|                 |                                                            |
|-----------------|------------------------------------------------------------|
| object          | SummarizedExperiment                                       |
| pathwaydt       | data.table, e.g. <a href="#">read_msigt</a>                |
| genevar         | gene fvar                                                  |
| genesep         | string or NULL                                             |
| coef            | string in coefs(object)                                    |
| fit             | 'limma', 'lm', 'lme', 'lmer', 'wilcoxon'                   |
| significancevar | 'p' or 'fdr'                                               |
| significance    | significance cutoff                                        |
| effectsizesize  | effectsizesize cutoff                                      |
| n               | no of detected genes required (for geneset to be examined) |
| genes           | whether to record genes                                    |
| verbose         | whether to msg                                             |

**Details**

This is an alternative enrichment analysis implementation. It is more modular: uses four times `.enrichment(VERBOSE)?` as backend. But also four times slower than `enrichment`, so not recommended. It is retained for testing purposes.

This alternative enrichment implementation

| verbose   | TRUE / FALSE: message?                                                                                                                                                                         |

## Value

SummarizedExperiment

## Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% analyze()
```

---

annotate\_compounddiscoverer

*Read compound discoverer output*

---

## Description

Read compound discoverer output

## Usage

```
annotate_compounddiscoverer(
  x,
  dir = getwd(),
  files = list.files(path = dir, pattern = ".*masslist.*\\.xlsx$", ignore.case = TRUE,
    full.names = TRUE),
  verbose = TRUE
)
```

## Arguments

|         |                                                |
|---------|------------------------------------------------|
| x       | SummarizedExperiment (read_compounddiscoverer) |
| dir     | compound discoverer output directory           |
| files   | compound discoverer masslist files             |
| verbose | TRUE or FALSE : message ?                      |

**Value**

SummarizedExperiment

---

|                   |                          |
|-------------------|--------------------------|
| annotate_maxquant | <i>Annotate maxquant</i> |
|-------------------|--------------------------|

---

**Description**

Annotate maxquant data.table

**Usage**

```
annotate_maxquant(  
  dt,  
  uniprothdrs,  
  contaminanthdrs,  
  maxquanthdrs,  
  restapi = FALSE,  
  verbose = TRUE  
)
```

**Arguments**

- dt data.table : output of read\_maxquant\_(proteingroups|phosphosites)
- uniprothdrs data.table : output of read\_uniprot dt
- contaminanthdrs data.table : output of read\_uniprot dt
- maxquanthdrs data.table : output of read\_uniprot dt
- restapi logical(1) : use uniprot restapi to complete missing annotations ?
- verbose logical(1) : message ?

**Details**

Uncollapse, annotate, curate, recollapse, name

**Value**

data.table

## Examples

```
# Fukuda 2020: contaminants + maxquanthdrs
#-----
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
dt <- .read_maxquant_proteingroups(file)
dt[, 1:2]
uniprothdrs <- NULL
contaminanthdrs <- read_contaminantdt()
maxquanthdrs <- parse_maxquant_hdrs(dt$`Fasta headers`); dt$`Fasta headers` <- NULL
dt %<>% annotate_maxquant(uniprothdrs, contaminanthdrs, maxquanthdrs)
dt[, 1:9]
dt[reverse== '+', 1:9]
dt[contaminant== '+', 1:9]

# Billing 2019: uniprothdrs + contaminants + maxquanthdrs
#-----
profile <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
fosfile <- system.file('extdata/billing19.phosphosites.txt', package = 'autonomics')
upfile <- system.file('extdata/uniprot_hsa_20140515.fasta', package = 'autonomics')
prodt <- .read_maxquant_proteingroups(profile); prodt[, 1:2]
fosdt <- .read_maxquant_phosphosites(fosfile, profile); fosdt[, 1:3]
uniprothdrs <- read_uniprot(dt)
contaminanthdrs <- read_contaminantdt()
maxquanthdrs <- parse_maxquant_hdrs(prodt$`Fasta headers`)
annotate_maxquant(prodt, uniprothdrs, contaminanthdrs, maxquanthdrs)[, 1:8]
annotate_maxquant(fosdt, uniprothdrs, contaminanthdrs, maxquanthdrs)[, 1:8]
```

---

annotate\_uniprot\_rest *Annotate uniprot/ensp*

---

## Description

Annotate uniprot/ensp

## Usage

```
annotate_uniprot_rest(x, columns = UNIPROTCOLS, verbose = TRUE)
```

## Arguments

|         |                  |
|---------|------------------|
| x       | character vector |
| columns | character vector |
| verbose | TRUE or FALSE    |

## Value

data.table(dbid, uniprot, reviewed, protein, gene, canonical, isoform, fragment, existence, organism, full)

**Examples**

```

annotate_uniprot_rest( x = c('P00761', 'Q32MB2') )
annotate_uniprot_rest( x = c('ENSBTAP00000006074', 'ENSP00000377550') )

```

---

```
assert_is_valid_sumexp
```

*Assert that x is a valid SummarizedExperiment*

---

**Description**

Assert that x is a valid SummarizedExperiment

**Usage**

```
assert_is_valid_sumexp(x, .xname = get_name_in_parent(x))
```

**Arguments**

|        |                        |
|--------|------------------------|
| x      | SummarizedExperiment   |
| .xname | see get_name_in_parent |

**Value**

TRUE or FALSE

**Examples**

```

# VALID
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
x <- read_metabolon(file)
assert_is_valid_sumexp(x)
# NOT VALID
rownames(SummarizedExperiment::colData(x)) <- NULL
# assert_is_valid_sumexp(x)

```

---

AUTONOMICS\_DATASETS     *Data used in examples/vignette/tests/longtests*

---

**Description**

Data used in examples/vignette/tests/longtests

**Usage**

```
AUTONOMICS_DATASETS
```

**Format**

An object of class character of length 19.

**Examples**

```
AUTONOMICS_DATASETS
```

---

|     |                                |
|-----|--------------------------------|
| bin | <i>Bin continuous variable</i> |
|-----|--------------------------------|

---

**Description**

Bin continuous variable

**Usage**

```
bin(object, ...)

## S3 method for class 'logical'
bin(object, ...)

## S3 method for class 'character'
bin(object, ...)

## S3 method for class 'factor'
bin(object, ...)

## S3 method for class 'numeric'
bin(object, probs = c(0, 0.33, 0.66, 1), ...)

## S3 method for class 'SummarizedExperiment'
bin(object, fvar, probs = c(0, 0.33, 0.66, 1), ...)
```

**Arguments**

|        |                                 |
|--------|---------------------------------|
| object | numeric or SummarizedExperiment |
| ...    | (S3 dispatch)                   |
| probs  | numeric                         |
| fvar   | string or NULL                  |

**Value**

factor vector

Examples

```
# Numeric vector
object <- rnorm(10, 5, 1)
bin(object)

# SummarizedExperiment
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
fdt(object <- read_maxquant_proteingroups(file))
fdt(bin(object, 'pepcounts'))
```

---

|        |               |
|--------|---------------|
| biplot | <i>Biplot</i> |
|--------|---------------|

---

Description

Biplot

Usage

```
biplot(
  object,
  method = biplot_methods(object)[1],

|-----------|-------------------------------------------|
| block2lme | <i>Put block in lme-compatible format</i> |
|-----------|-------------------------------------------|

---

## Description

Put block in lme-compatible format

## Usage

```
block2lme(block, ...)

## S3 method for class 'list'
block2lme(block, verbose = TRUE, ...)

## S3 method for class 'formula'
block2lme(block, verbose = TRUE, ...)

## S3 method for class 'character'
block2lme(block, verbose = TRUE, ...)

formula2lmer(formula, block)

formula2lm(formula, block)

block_vars(formula)
```

## Arguments

|         |                                    |
|---------|------------------------------------|
| block   | block: character vector or formula |
| ...     | required for s3 dispatch           |
| verbose | TRUE or FALSE                      |
| formula | formula                            |

## Examples

```
# lme: ensure lme-compatible block specification
block2lme( block = list(subject = ~1, batch = ~1))
block2lme( block = ~1|subject)
block2lme( block = c('subject', 'batch'))

# lm: integrate block into formula as random effect
formula2lm( formula = ~ subgroup, block = c('subject', 'batch') )

# lmer: integrate block into formula as fixed effect
formula2lmer( formula = ~ subgroup, block = c('subject', 'batch') )
formula2lmer( formula = ~ subgroup + (1|subject) + (1|batch) )
```

## Description

Contrast Code Factor for General Linear Model

## Usage

```
code(object, ...)

## S3 method for class 'factor'
code(object, codingfun, verbose = TRUE, ...)

## S3 method for class 'data.table'
code(object, codingfun, vars = names(object), verbose = TRUE, ...)

contr.treatment.explicit(n)

code_control(n)

contr.diff(n)

code_diff(n)

code_diff_forward(n)

code_deviation(n)

code_deviation_first(n)

code_helmert(n)

code_helmert_forward(n)
```

## Arguments

|           |                        |
|-----------|------------------------|
| object    | factor vector          |
| ...       | used for s3 dispatch   |
| codingfun | factor coding function |

- `contr.treatment`: intercept =  $y_0$ ,  $\text{coef}_i = y_i - y_0$
- `contr.treatment.explicit`: intercept =  $y_0$ ,  $\text{coef}_i = y_i - y_0$
- `code_control`: intercept =  $y_{\text{mean}}$ ,  $\text{coef}_i = y_i - y_0$
- `contr.diff`: intercept =  $y_0$ ,  $\text{coef}_i = y_i - y_{(i-1)}$
- `code_diff`: intercept =  $y_{\text{mean}}$ ,  $\text{coef}_i = y_i - y_{(i-1)}$

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## Details

A General Linear Model contains:

- \* An Intercept Coefficient: expressing some form of sample average
- \* For each numeric variable: a slope coefficient
- \* For each k-leveled factor: (k-1) Contrast Coefficients.

The interpretation of (intercept and contrast) coefficients depends on the contrast coding function used. Several contrast coding functions are available in 'stats' and 'codingMatrices' But their (function and coefficient) namings are a bit confusing and unsystematic. Instead, the functions below offer an intuitive interface (to the otherwise powerful stats/codingMatrices packages). The names of these functions reflect the contrast coding used (treatment, backward, sum, or helmert contrasts). They also reflect the intercept interpretation (either first factor's first level or grand mean). They all produce intuitive coefficient names (e.g. 't1-t0' rather than just 't1'). They all have unit scaling (a coefficient of 1 means a backward of 1).

## Value

(explicitly coded) factor vector

## Examples

```
# Coding functions
x <- factor(paste0('t', 0:3))
xlevels <- levels(x)
contr.treatment(      xlevels)
contr.treatment.explicit(xlevels)
contr.diff(           xlevels)
code_control(         xlevels)
code_diff(            xlevels)
code_diff_forward(    xlevels)
code_deviation(       xlevels)
code_deviation_first( xlevels)
code_helmert(         xlevels)
code_helmert_forward( xlevels)

# Code
x %<>% code(contr.treatment)
x %<>% code(contr.treatment.explicit)
x %<>% code(contr.diff)
x %<>% code(code_control)
```

```

x %<>% code(code_diff)
x %<>% code(code_diff_forward)
x %<>% code(code_deviation)
x %<>% code(code_deviation_first)
x %<>% code(code_helmert)
x %<>% code(code_helmert_forward)

# Model
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% fit_limma(codingfun = contr.treatment) # default
object %<>% fit_limma(codingfun = contr.treatment.explicit)
object %<>% fit_limma(codingfun = contr.diff)
object %<>% fit_limma(codingfun = code_control)
object %<>% fit_limma(codingfun = code_diff)
object %<>% fit_limma(codingfun = code_diff_forward)
object %<>% fit_limma(codingfun = code_deviation)
object %<>% fit_limma(codingfun = code_deviation_first)
object %<>% fit_limma(codingfun = code_helmert)
object %<>% fit_limma(codingfun = code_helmert_forward)

```

---

coefs

*Get coefs*

---

## Description

Get coefs

## Usage

```
coefs(object, ...)
```

```
## S3 method for class 'factor'
```

```
coefs(object, intercept = FALSE, ...)
```

```
## S3 method for class 'data.table'
```

```
coefs(object, fit = fits(object), intercept = FALSE, ...)
```

```
## S3 method for class 'SummarizedExperiment'
```

```
coefs(object, fit = fits(object), intercept = FALSE, ...)
```

## Arguments

|           |                                                  |
|-----------|--------------------------------------------------|
| object    | factor, data.table, SummarizedExperiment         |
| ...       | required for s3 dispatch                         |
| intercept | TRUE or FALSE : whether to include the intercept |
| fit       | 'limma', 'lm', 'lme', 'lmer', 'wilcoxon'         |

**Value**

character vector

**Examples**

```
# Factor
x <- factor(c('A', 'B', 'C'))
coefs(x)
coefs(code(x, contr.treatment.explicit))
coefs(code(x, code_control))

# SummarizedExperiment
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file, fit = 'limma')
coefs(object)
coefs(object, intercept = TRUE)
```

---

collapsed\_entrezg\_to\_symbol

*Collapsed entrezg to genesymbol*

---

**Description**

Collapsed entrezg to genesymbol

**Usage**

```
collapsed_entrezg_to_symbol(x, sep, orgdb)
```

**Arguments**

|       |                 |
|-------|-----------------|
| x     | charactervector |
| sep   | string          |
| orgdb | OrgDb           |

**Value**

character vector

**Examples**

```
if (requireNamespace('org.Hs.eg.db', quiet = TRUE)){
  x <- c('7448/3818/727', '5034/9601/64374')
  orgdb <- org.Hs.eg.db::org.Hs.eg.db
  collapsed_entrezg_to_symbol(x, sep = '/', orgdb = orgdb)
}
```

---

|                                              |
|----------------------------------------------|
| COMPOUNDDISCOVERER_PATTERNS                  |
| <i>compound discoverer quantity patterns</i> |

---

**Description**

compound discoverer quantity patterns

**Usage**

COMPOUNDDISCOVERER\_PATTERNS

**Format**

An object of class character of length 2.

**Examples**

COMPOUNDDISCOVERER\_PATTERNS

---

|                |                        |
|----------------|------------------------|
| contrast_coefs | <i>Get model coefs</i> |
|----------------|------------------------|

---

**Description**

Get model coefs

**Usage**

```
contrast_coefs(  
  object,  
  formula = default_formula(object),  
  drop = varlevels_dont_clash(object, all.vars(formula)),  
  codingfun = contr.treatment.explicit,  
  design = create_design(object, formula = formula, drop = drop, codingfun = codingfun,  
    verbose = FALSE)  
)  
  
model_coefs(  
  object,  
  formula = default_formula(object),  
  drop = varlevels_dont_clash(object, all.vars(formula)),  
  codingfun = contr.treatment.explicit,  
  design = create_design(object, formula = formula, drop = drop, codingfun = codingfun,  
    verbose = FALSE)  
)
```

**Arguments**

|           |                                        |
|-----------|----------------------------------------|
| object    | SummarizedExperiment                   |
| formula   | formula                                |
| drop      | TRUE or FALSE                          |
| codingfun | coding function (e.g. contr.treatment) |
| design    | design matrix                          |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% fit_limma()
model_coefs(object)
contrast_coefs(object)
```

---

|                          |
|--------------------------|
| contrast_subgroup_cols   |
| <i>Row/Col contrasts</i> |

---

**Description**

Row/Col contrasts

**Usage**

```
contrast_subgroup_cols(object, subgroupvar)

contrast_subgroup_rows(object, subgroupvar)
```

**Arguments**

|             |                      |
|-------------|----------------------|
| object      | SummarizedExperiment |
| subgroupvar | subgroup svar        |

**Value**

matrix

Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object$subgroup <- paste0(object$Diabetes, '.', object$Time)
subgroup_matrix(object, subgroupvar = 'subgroup')
contrast_subgroup_cols(object, subgroupvar = 'subgroup')
contrast_subgroup_rows(object, subgroupvar = 'subgroup')
```

---

|        |                       |
|--------|-----------------------|
| counts | <i>Get/Set counts</i> |
|--------|-----------------------|

---

Description

Get / Set counts matrix

Usage

```
counts(object)

## S4 method for signature 'SummarizedExperiment'
counts(object)

counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,NULL'
counts(object) <- value
```

Arguments

|        |                                   |
|--------|-----------------------------------|
| object | SummarizedExperiment              |
| value  | count matrix (features x samples) |

Value

count matrix (get) or updated object (set)

Examples

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
counts(object)[1:3, 1:3]
counts(object) <- values(object)
```

---

|            |                                           |
|------------|-------------------------------------------|
| counts2cpm | <i>Convert between counts and cpm/tpm</i> |
|------------|-------------------------------------------|

---

**Description**

Convert between counts and cpm/tpm

**Usage**

```
counts2cpm(x, libsize = scaledlibsizes(x))  
  
cpm2counts(x, libsize)
```

**Arguments**

x                    count/cpm matrix  
libsize            (scaled) libsize vector

**Value**

cpm/tpm/count matrix

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')  
object <- read_rnaseq_counts(file)  
libsize <- scaledlibsizes(counts(object))  
tpm <- counts2tpm(counts(object), genesize = 1)  
cpm <- counts2cpm(counts(object), libsize)  
counts <- cpm2counts(cpm, libsize)  
sum(counts(object) - counts)
```

---

|            |                      |
|------------|----------------------|
| counts2tpm | <i>counts to tpm</i> |
|------------|----------------------|

---

**Description**

counts to tpm

**Usage**

```
counts2tpm(x, genesize)
```

**Arguments**

x                    count matrix  
genesize            genesize vector (kilobase)

**Value**

tpm matrix

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
counts(object)[1:3, 1:3]
counts2tpm(counts(object), genesize = 1)[1:3, 1:3]
```

---

|          |                                               |
|----------|-----------------------------------------------|
| count_in | <i>Count/Collapse in/outside intersection</i> |
|----------|-----------------------------------------------|

---

**Description**

Count/Collapse in/outside intersection

**Usage**

```
count_in(x, ...)

## S3 method for class 'character'
count_in(x, y, ...)

## S3 method for class 'factor'
count_in(x, y, ...)

## S3 method for class 'list'
count_in(x, y, ...)

collapse_in(x, ...)

## S3 method for class 'character'
collapse_in(x, y, sep, ...)

## S3 method for class 'factor'
collapse_in(x, y, sep, ...)

## S3 method for class 'list'
collapse_in(x, y, sep, ...)

count_out(x, ...)

## S3 method for class 'character'
count_out(x, y, ...)

## S3 method for class 'factor'
```

```
count_out(x, y, ...)

## S3 method for class 'list'
count_out(x, y, ...)
```

### Arguments

|     |                      |
|-----|----------------------|
| x   | character OR list    |
| ... | used for S3 dispatch |
| y   | character            |
| sep | string               |

### Value

number OR numeric

### Examples

```
# Sets
contrast1 <- c('a', 'b', 'c', 'd')
pathway <- c('c', 'd', 'e', 'f')
contrast2 <- c('e', 'f', 'g', 'h')

# Count outside
count_out(contrast1, pathway)
count_out(list(contrast1 = contrast1, contrast2 = contrast2), pathway)

# Count inside
count_in(contrast1, pathway)
count_in(list(contrast1 = contrast1, contrast2 = contrast2), pathway)

# Collapse inside
collapse_in(contrast1, pathway, sep = ' ')
collapse_in(list(contrast1 = contrast1, contrast2 = contrast2), pathway, sep = ' ')
```

---

cpm

*Get/Set cpm*

---

### Description

Get / Set cpm matrix

### Usage

```
cpm(object)

## S4 method for signature 'SummarizedExperiment'
cpm(object)
```

```

cpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
cpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
cpm(object) <- value

```

### Arguments

|        |                                 |
|--------|---------------------------------|
| object | SummarizedExperiment            |
| value  | cpm matrix (features x samples) |

### Value

cpm matrix (get) or updated object (set)

### Examples

```

file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
cpm(object)[1:3, 1:3]
cpm(object) <- values(object)

```

---

|---------------|-----------------------------|
| create_design | <i>Create design matrix</i> |
|---------------|-----------------------------|

---

### Description

Create design matrix for statistical analysis

### Usage

```

create_design(object, ...)

## S3 method for class 'SummarizedExperiment'
create_design(
  object,
  formula = default_formula(object),
  drop = varlevels_dont_clash(object, all.vars(formula)),
  codingfun = contr.treatment.explicit,
  verbose = TRUE,
  ...
)

## S3 method for class 'data.table'
create_design(

```

```

    object,
    formula = default_formula(object),
    drop = varlevels_dont_clash(object, all.vars(formula)),
    codingfun = contr.treatment.explicit,
    verbose = TRUE,
    ...
  )

```

## Arguments

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| download_gtf                                                                                                                                                                                              | <i>Download GTF file</i>           |

**Description**

Download GTF file with feature annotations

**Usage**

```
download_gtf(  
  organism,  
  release = 100,  
  gtffile = sprintf("%s/gtf/%s", R_user_dir("autonomics", "cache"),  
    basename(make_gtf_url(organism, release) %>% substr(1, nchar(.) - 3)))  
)
```

**Arguments**

|          |                                                       |
|----------|-------------------------------------------------------|
| organism | 'Homo sapiens', 'Mus musculus' or 'Rattus norvegicus' |
| release  | GTF release (number)                                  |
| gtffile  | string: path to local GTF file                        |

**Value**

gtffile path

**Examples**

```
organism <- 'Homo sapiens'
# download_gtf(organism)
```

---

|                    |                                |
|--------------------|--------------------------------|
| download_mcclain21 | <i>Download mcclain21 data</i> |
|--------------------|--------------------------------|

---

**Description**

Download mcclain21 data

**Usage**

```
download_mcclain21(
  counts_or_samples = "counts",
  localdir = file.path(DATADIR, "mcclain21"),
  force = FALSE
)
```

**Arguments**

|                   |                       |
|-------------------|-----------------------|
| counts_or_samples | 'counts' or 'samples' |
| localdir          | dirname               |
| force             | TRUE or FALSE         |

**Details**

**Mc clain 2021: COVID19 transcriptomics:**

**Examples**

```
download_mcclain21('counts')
download_mcclain21('samples')
```

---

|--------|---------------------------------|
| dt2mat | <i>'data.table' to 'matrix'</i> |
|--------|---------------------------------|

---

**Description**

Convert between 'data.table' and 'matrix'

**Usage**

```
dt2mat(x)

mat2dt(x, idvar)
```

**Arguments**

x                    data.table / matrix  
idvar                idvar string

**Value**

matrix / data.table

**Examples**

```
x <- data.table::data.table(
  gene   = c('ENSG001', 'ENSG002', 'ENSG003'),
  sampleA = c(1787, 10, 432),
  sampleB = c(1143, 3, 268))
dt2mat(x)
mat2dt(dt2mat(x), 'gene')
```

---

|            |                            |
|------------|----------------------------|
| enrichment | <i>Enrichment analysis</i> |
|------------|----------------------------|

---

**Description**

Are selected genes enriched in pathway?

**Usage**

```
enrichment(
  object,
  pathwaydt,
  fit = fits(object)[1],
  coef = coefs(object, fit = fit)[1],
  var = abstractvar(object, fit = fit, coef = coef),
```

```

    levels = fdt(object)[[var]] %>% base::levels() %>% extract(-1),
    genevar = "gene",
    genesep = "[,;]",
    n = 3,
    verbose = TRUE,
    genes = FALSE
  )

```

## Arguments

|           |                         |
|-----------|-------------------------|
| object    | SummarizedExperiment    |
| pathwaydt | pathway data.table      |
| fit       | string                  |
| coef      | string                  |
| var       | selection fvar          |
| levels    | selection levels        |
| genevar   | gene fvar               |
| genesep   | gene separator (string) |
| n         | number                  |
| verbose   | whether to msg          |
| genes     | whether to report genes |

## Details

Four enrichment analyses per geneset using the Fisher Exact Test (see four pvalues). Results are returned in a data.table

|                 |                                                                                                |
|-----------------|------------------------------------------------------------------------------------------------|
| in              | : genes in pathway                                                                             |

|-------------------|------------------------------|
| entrezg_to_symbol | <i>Entrezg to genesymbol</i> |
|-------------------|------------------------------|

---

**Description**

Entrezg to genesymbol

**Usage**

```
entrezg_to_symbol(x, orgdb)
```

**Arguments**

|       |                 |
|-------|-----------------|
| x     | charactervector |
| orgdb | OrgDb           |

**Value**

character vector

**Examples**

```
if (requireNamespace('org.Hs.eg.db', quiet = TRUE)){
  orgdb <- org.Hs.eg.db::org.Hs.eg.db
  entrezg_to_symbol(x = c('7448', '3818', '727'), orgdb)
}
```

---

|                   |                                                                 |
|-------------------|-----------------------------------------------------------------|
| extract_rectangle | <i>Extract rectangle from omics file, data.table, or matrix</i> |
|-------------------|-----------------------------------------------------------------|

---

**Description**

Extract rectangle from omics file, data.table, or matrix

**Usage**

```
extract_rectangle(x, ...)

## S3 method for class 'character'
extract_rectangle(
  x,
  rows = seq_len(nrows(x, sheet = sheet)),
  cols = seq_len(ncols(x, sheet = sheet)),
  verbose = FALSE,
  transpose = FALSE,
  drop = FALSE,
```

```

    sheet = 1,
    ...
)

## S3 method for class 'data.table'
extract_rectangle(
  x,
  rows = seq_len(nrow(x)),
  cols = seq_len(ncol(x)),
  transpose = FALSE,
  drop = FALSE,
  ...
)

## S3 method for class 'matrix'
extract_rectangle(
  x,
  rows = seq_len(nrow(x)),
  cols = seq_len(ncol(x)),
  transpose = FALSE,
  drop = FALSE,
  ...
)

```

### Arguments

|           |                              |
|-----------|------------------------------|
| x         | omics datafile or datatable  |
| ...       | allow for S3 method dispatch |
| rows      | numeric vector               |
| cols      | numeric vector               |
| verbose   | logical                      |
| transpose | logical                      |
| drop      | logical                      |
| sheet     | numeric or string            |

### Value

matrix

### Examples

```

# FROM FILE: extract_rectangle.character
#=====

)

```

**Arguments**

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| distmat | distance matrix      |
| method  | 'cmeans'             |
| k       | number of clusters   |
| verbose | TRUE or FALSE        |
| plot    | TRUE or FALSE        |
| label   | fvar                 |
| alpha   | fraction             |
| nrow    | number               |
| ncol    | number               |

**Value**

SummarizedExperiment

SummarizedExperiment

**Examples**

```

object <- twofactor_sumexp()
dmat <- fdist(object)
fcluster(object) # membership-based colors
fcluster(object, dmat) # silhouette-based colors
fcluster(object, dmat, method = c('cmeans', 'hclust', 'pamk')) # more methods

```

|--------------------------------------------------------------------|
| filter_exprs_replicated_in_some_subgroup                           |
| <i>Filter features with replicated expression in some subgroup</i> |

---

**Description**

Filter features with replicated expression in some subgroup

**Usage**

```
filter_exprs_replicated_in_some_subgroup(
  object,
  subgroupvar = "subgroup",
  assay = assayNames(object)[1],
  comparator = if (contains_ratios(object)) "!=" else ">",
  lod = 0,
```

```
    nsample = 2,  
    nsubgroup = 1,  
    verbose = TRUE  
  )
```

### Arguments

|             |                            |
|-------------|----------------------------|
| object      | SummarizedExperiment       |
| subgroupvar | subgroup svar              |
| assay       | string                     |
| comparator  | '>' or '!='                |
| lod         | number: limit of detection |
| nsample     | number                     |
| nsubgroup   | number                     |
| verbose     | TRUE or FALSE              |

### Value

Filtered SummarizedExperiment

### Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')  
object <- read_metabolon(file)  
object %<>% filter_exprs_replicated_in_some_subgroup()

```

**Arguments**

|           |                      |
|-----------|----------------------|
| object    | SummarizedExperiment |
| condition | filter condition     |
| verbose   | TRUE/FALSE           |
| record    | TRUE/FALSE           |

**Value**

filtered SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
filter_samples(object, subgroup != 't0', verbose = TRUE)
```

---

|          |                 |
|----------|-----------------|
| fitcoefs | <i>fitcoefs</i> |
|----------|-----------------|

---

**Description**

fitcoefs

**Usage**

```
fitcoefs(object)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
|--------|----------------------|

**Value**

string vector

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
fitcoefs(object)
fitcoefs(fit_limma(object))
```

fix\_xlgenes

*Fix excel genes*

---

## Description

Fix excel genes

**Usage**

```
fix_xlgenes(x)
```

**Arguments**

x                      character

**Value**

character

**Examples**

```
x <- c('FAM46B', '15-Sep', '2-Mar', 'MARCHF6')
x
fix_xlgenes(x)
```

---

|         |                        |
|---------|------------------------|
| flevels | <i>Get fvar levels</i> |
|---------|------------------------|

---

**Description**

Get fvar levels

**Usage**

```
flevels(object, fvar)
```

**Arguments**

object                SummarizedExperiment  
fvar                   feature variable

**Value**

fvar values

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
head(flevels(object, 'feature_id'))
```

---

|        |                       |
|--------|-----------------------|
| fnames | <i>Get/Set fnames</i> |
|--------|-----------------------|

---

**Description**

Get/Set feature names

**Usage**

```
fnames(object)

## S4 method for signature 'SummarizedExperiment'
fnames(object)

fnames(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,character'
fnames(object) <- value
```

**Arguments**

|        |                                      |
|--------|--------------------------------------|
| object | SummarizedExperiment, eSet, or EList |
| value  | character vector with feature names  |

**Value**

feature name vector (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
fnames(object) %<>% paste0('protein_', .)
object
```

|-------------|--------------------------|
| formula2str | <i>formula to string</i> |
|-------------|--------------------------|

---

**Description**

formula to string

**Usage**

```
formula2str(formula)
```

**Arguments**

formula                      formula

**Value**

string

**Examples**

```
formula2str(~0+subgroup)
```

---

|       |                     |
|-------|---------------------|
| ftype | <i>Feature type</i> |
|-------|---------------------|

---

**Description**

Feature type

**Usage**

```
ftype(  
  object,  
  formula = default_formula(object),  
  drop = varlevels_dont_clash(object, all.vars(formula)),  
  fit = fits(object)[1],  
  codingfun = contr.treatment.explicit  
)
```

**Arguments**

|           |                                  |
|-----------|----------------------------------|
| object    | SummarizedExperiment             |
| formula   | model formula                    |
| drop      | TRUE or FALSE                    |
| fit       | 'limma', 'lm', 'lme', 'wilcoxon' |
| codingfun | coding function                  |

**Value**

SummarizedExperiment

**Examples**

```
file <- download_data('atkin.metabolon.xlsx')  
object <- read_metabolon(file)  
object %<>% fit_limma(block = 'Subject') # model_coefs !  
object %<>% ftype()                      # model_coefs not contrast_coefs !  
fdt(object)                              # because intercept is required to recreate predictions
```

---

**fvalues***Get fvalues*

---

**Description**

Get fvar values

**Usage**

```
fvalues(object, fvar)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| fvar   | feature variable     |

**Value**

fvar values

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
head(fvalues(object, 'feature_id'))
fvalues(object, NULL)
```

---

**fvars***Get/Set fvars*

---

**Description**

Get/Set feature variables

**Usage**

```
fvars(object)
```

```
## S4 method for signature 'SummarizedExperiment'
fvars(object)
```

```
fvars(object) <- value
```

```
## S4 replacement method for signature 'SummarizedExperiment,character'
fvars(object) <- value
```

Arguments

|        |                                         |
|--------|-----------------------------------------|
| object | SummarizedExperiment                    |
| value  | character vector with feature variables |

Value

feature variables vector (get) or updated object (set)

Examples

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
fvars(object)[1] %<>% paste0('1')
fvars(object)[1]
```

---

|                 |                                |
|-----------------|--------------------------------|
| genome_to_orgdb | <i>Get corresponding orgdb</i> |
|-----------------|--------------------------------|

---

Description

Get corresponding orgdb

Usage

```
genome_to_orgdb(genome)
```

Arguments

|        |                                  |
|--------|----------------------------------|
| genome | 'hg38', 'hg19', 'mm10', or 'mm9' |
|--------|----------------------------------|

Value

OrgDb

Examples

```
if (requireNamespace('org.Hs.eg.db', quiet = TRUE)){
  class(genome_to_orgdb('hg38'))
}
```

---

|                |                       |
|----------------|-----------------------|
| group_by_level | <i>group by level</i> |
|----------------|-----------------------|

---

## Description

group by level

## Usage

```
group_by_level(x, ...)

## S3 method for class 'character'
group_by_level(x, ...)

## S3 method for class 'factor'
group_by_level(x, ...)

## S3 method for class 'data.table'
group_by_level(x, var, idvar, ...)
```

## Arguments

|       |                                |
|-------|--------------------------------|
| x     | named logical/character/factor |
| ...   | S3 dispatch                    |
| var   | string                         |
| idvar | string                         |

## Value

unnamed character

## Examples

```
t1 <- c( KLF5 = 'up', F11 = 'up', RIG = 'flat', ABT1 = 'down')
dt <- data.table( gene = c( 'KL5', 'F11', 'RIG', 'ABT1' ),
                  t1 = c( 'up', 'up', 'flat', 'down' ) )
group_by_level(t1)           # character
group_by_level(factor(t1))   # factor
group_by_level(dt, 't1', 'gene') # data.table
```

---

|                                                       |
|-------------------------------------------------------|
| guess_compounddiscoverer_quantity                     |
| <i>Guess compound discoverer quantity from snames</i> |

---

**Description**

Guess compound discoverer quantity from snames

**Usage**

guess\_compounddiscoverer\_quantity(x)

**Arguments**

x                      character vector

**Value**

string: value from names(COMPOUNDDISCOVERER\_PATTERNS)

**Examples**

```
## Not run:
# file
  file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
  guess_compounddiscoverer_quantity(file)

## End(Not run)

# character vector
x <- "Area: 20230908_F143_HILICNEG.raw (F11)"
guess_compounddiscoverer_quantity(x)

x <- "Norm. Area: 20230908_F143_HILICNEG.raw (F11)"
guess_compounddiscoverer_quantity(x)
```

---

|              |                     |
|--------------|---------------------|
| guess_fitsep | <i>guess_fitsep</i> |
|--------------|---------------------|

---

**Description**

guess\_fitsep

**Usage**

```
guess_fitsep(object, ...)  
  
## S3 method for class 'data.table'  
guess_fitsep(object, ...)  
  
## S3 method for class 'SummarizedExperiment'  
guess_fitsep(object, ...)
```

**Arguments**

|        |                                    |
|--------|------------------------------------|
| object | data.table or SummarizedExperiment |
| ...    | S3 dispatch                        |

**Value**

string

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')  
object <- read_maxquant_proteingroups(file)  
object %<>% fit_limma()  
guess_fitsep(object)
```

---

guess\_maxquant\_quantity

*Guess maxquant quantity from snames*

---

**Description**

Guess maxquant quantity from snames

**Usage**

```
guess_maxquant_quantity(x)
```

**Arguments**

|   |                  |
|---|------------------|
| x | character vector |
|---|------------------|

**Value**

string: value from names(MAXQUANT\_PATTERNS)

**Examples**

```
# file
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
guess_maxquant_quantity(file)

# character vector
x <- "Ratio M/L normalized STD(L)_E00(M)_E01(H)_R1"
guess_maxquant_quantity(x)

x <- "Ratio M/L STD(L)_E00(M)_E01(H)_R1"
guess_maxquant_quantity(x)

x <- "LFQ intensity E00.R1"
guess_maxquant_quantity(x)

x <- "Reporter intensity corrected 0 STD(0)E00(1)E01(2)_R1"
guess_maxquant_quantity(x)

x <- "Reporter intensity 0 STD(0)E00(1)E01(2)_R1"
guess_maxquant_quantity(x)

x <- "Intensity H STD(L)_E00(M)_E01(H)_R1"
guess_maxquant_quantity(x)
```

---

guess\_sep

*Guess separator*

---

**Description**

Guess separator

**Usage**

```
guess_sep(x, ...)
```

## S3 method for class 'numeric'

```
guess_sep(x, ...)
```

## S3 method for class 'character'

```
guess_sep(x, separators = c(".", "_"), verbose = FALSE, ...)
```

## S3 method for class 'factor'

```
guess_sep(x, ...)
```

## S3 method for class 'SummarizedExperiment'

```
guess_sep(x, var = "sample_id", separators = c(".", "_"), verbose = FALSE, ...)
```

**Arguments**

x                    character vector or SummarizedExperiment  
 ...                  used for proper S3 method dispatch  
 separators          character vector: possible separators to look for  
 verbose             TRUE or FALSE  
 var                  svar or fvar

**Value**

separator (string) or NULL (if no separator could be identified)

**Examples**

```

# character vector
guess_sep(c('PERM_NON.R1[H/L]', 'PERM_NON.R2[H/L]'))
guess_sep(c('WT_untreated_1', 'WT_untreated_2'))
guess_sep(c('group1', 'group2.R1'))
# SummarizedExperiment
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
guess_sep(object)

```

---

|                     |                                      |
|---------------------|--------------------------------------|
| has_multiple_levels | <i>Variable has multiple levels?</i> |
|---------------------|--------------------------------------|

---

**Description**

Variable has multiple levels?

**Usage**

```

has_multiple_levels(x, ...)

## S3 method for class 'character'
has_multiple_levels(x, .xname = get_name_in_parent(x), ...)

## S3 method for class 'factor'
has_multiple_levels(x, .xname = get_name_in_parent(x), ...)

## S3 method for class 'numeric'
has_multiple_levels(x, .xname = get_name_in_parent(x), ...)

## S3 method for class 'data.table'
has_multiple_levels(
  x,
  y,

```

```

    .xname = get_name_in_parent(x),
    .yname = get_name_in_parent(y),
    ...
)

## S3 method for class 'SummarizedExperiment'
has_multiple_levels(
  x,
  y,
  .xname = get_name_in_parent(x),
  .yname = get_name_in_parent(y),
  ...
)
```

### Arguments

|        |                                            |
|--------|--------------------------------------------|
| x      | vector, data.table or SummarizedExperiment |
| ...    | required for s3 dispatch                   |
| .xname | string                                     |
| y      | string                                     |
| .yname | string                                     |

### Value

TRUE or false

### Examples

```

# numeric
a <- numeric();      has_multiple_levels(a)
a <- c(1, 1);        has_multiple_levels(a)
a <- c(1, 2);        has_multiple_levels(a)

# character
a <- character();    has_multiple_levels(a)
a <- c('A', 'A');    has_multiple_levels(a)
a <- c('A', 'B');    has_multiple_levels(a)

# factor
a <- factor();       has_multiple_levels(a)
a <- factor(c('A', 'A')); has_multiple_levels(a)
a <- factor(c('A', 'B')); has_multiple_levels(a)

# data.table
dt <- data.table(a = factor());      has_multiple_levels(dt, 'b')
dt <- data.table(a = factor());      has_multiple_levels(dt, 'a')
dt <- data.table(a = factor());      has_multiple_levels(dt, 'a')
dt <- data.table(a = factor(c('A', 'A'))); has_multiple_levels(dt, 'a')
dt <- data.table(a = factor(c('A', 'B'))); has_multiple_levels(dt, 'a')

# sumexp
object <- matrix(1:9, nrow = 3)
rownames(object) <- sprintf('%d', 1:3)
colnames(object) <- sprintf('%d', 1:3)
```

```
object <- list(exprs = object)
object %<>% SummarizedExperiment::SummarizedExperiment()
object$subgroup <- c('A', 'A', 'A');           has_multiple_levels(object, 'group')
object$subgroup <- c('A', 'A', 'A');           has_multiple_levels(object, 'subgroup')
object$subgroup <- c('A', 'B', 'A');           has_multiple_levels(object, 'subgroup')
```

---

|             |                                   |
|-------------|-----------------------------------|
| hdlproteins | <i>hdl proteomewatch proteins</i> |
|-------------|-----------------------------------|

---

**Description**

hdl proteomewatch proteins

**Usage**

```
hdlproteins()
```

**Value**

string vector: HDLProteomeWatch protein entries

**Examples**

```
hdlproteins()
```

---

|        |               |
|--------|---------------|
| impute | <i>Impute</i> |
|--------|---------------|

---

**Description**

Impute NA values

**Usage**

```
impute(object, ...)
```

```
## S3 method for class 'numeric'
impute(object, shift = 2.5, width = 0.3, verbose = TRUE, plot = FALSE, ...)
```

```
## S3 method for class 'matrix'
impute(
  object,
  shift = 2.5,
  width = 0.3,
  verbose = TRUE,
  plot = FALSE,
```

```

    n = min(9, ncol(object)),
    palette = make_colors(colnames(object)),
    ...
)

## S3 method for class 'SummarizedExperiment'
impute(
  object,
  assay = assayNames(object)[1],
  by = "subgroup",
  shift = 2.5,
  width = 0.3,
  frac = 0.5,
  verbose = TRUE,
  plot = FALSE,
  palette = make_colors(colnames(object)),
  n = min(9, ncol(object)),
  ...
)

```

### Arguments

|                      |                                                                                                                 |
|----------------------|-----------------------------------------------------------------------------------------------------------------|
| <code>object</code>  | numeric vector, SumExp                                                                                          |
| <code>...</code>     | required for s3 dispatch                                                                                        |
| <code>shift</code>   | number: sd units                                                                                                |

| <code>verbose</code> | TRUE or FALSE                                                                                                   |
| <code>plot</code>    | TRUE or FALSE                                                                                                   |
| <code>n</code>       | number of samples to plot                                                                                       |
| <code>palette</code> | color vector                                                                                                    |
| <code>assay</code>   | string                                                                                                          |
| <code>by</code>      | svar                                                                                                            |
| <code>frac</code>    | fraction: fraction of available samples should be greater than this value for a subgroup to be called available |

### Details

Imputes NA values from  $N(\text{mean} - 2.5 \text{ sd}, 0.3 \text{ sd})$

### Value

numeric vector, matrix or SumExp

**Examples**

```
# Simple Design
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
impute(values(object)[, 1], plot = TRUE)[1:3]           # vector
impute(values(object),      plot = TRUE)[1:3, 1:3]      # matrix
impute(object, plot = TRUE)                             # sumexp

# Complex Design
subgroups <- sprintf('%s_STD', c('E00', 'E01', 'E02', 'E05', 'E15', 'E30', 'M00'))
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file, subgroups = subgroups)
impute(values(object)[1:3, 1  ] )      # vector
impute(values(object)[1:3, 1:5  ] )     # matrix
impute( object )                       # sumexp
```

---

|                  |                         |
|------------------|-------------------------|
| invert_subgroups | <i>Invert subgroups</i> |
|------------------|-------------------------|

---

**Description**

Invert expressions , subgroups, and sample ids

**Usage**

```
invert_subgroups(
  object,
  subgroups = slevels(object, "subgroup"),
  sep = guess_sep(object, "subgroup")
)
```

**Arguments**

|           |                                                  |
|-----------|--------------------------------------------------|
| object    | SummarizedExperiment                             |
| subgroups | character vector: subgroup levels to be inversed |
| sep       | string: collapsed string separator               |

**Value**

character vector or SummarizedExperiment

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
invert_subgroups(object)
```

---

is\_collapsed\_subset    *Is collapsed subset*

---

### Description

Is collapsed subset

### Usage

```
is_collapsed_subset(x, y, sep = ";")
```

### Arguments

|     |                  |
|-----|------------------|
| x   | character vector |
| y   | character vector |
| sep | string           |

### Value

character vector

### Examples

```
x <- c('H3BNX8;H3BRM5', 'G5E9Y3')
y <- c('P20674;H3BNX8;H3BV69;H3BRM5', 'G5E9Y3;Q8WWN8;B4DIT1')
is_collapsed_subset(x, y)
```

---

is\_correlation\_matrix    *Assert correlation matrix*

---

### Description

Assert correlation matrix

### Usage

```
is_correlation_matrix(
  x,
  .xname = get_name_in_parent(x),
  severity = getOption("assertive.severity", "stop")
)

assert_correlation_matrix(x, .xname = get_name_in_parent(x))
```

**Arguments**

|          |                     |
|----------|---------------------|
| x        | correlation matrix  |
| .xname   | string              |
| severity | 'warning' or 'stop' |

**Value**

TRUE or false

**Examples**

```
x <- matrix(c(1,0.7, 0.3, 1), nrow = 2)
rownames(x) <- c('gene1', 'gene2')
colnames(x) <- c('gene1', 'gene2')
is_correlation_matrix(x)
is_correlation_matrix({x[1,1] <- -2; x})
```

---

|                 |                                                              |
|-----------------|--------------------------------------------------------------|
| is_diann_report | <i>Is diann, fragpipe, proteingroups, phosphosites file?</i> |
|-----------------|--------------------------------------------------------------|

---

**Description**

Is diann, fragpipe, proteingroups, phosphosites file?

**Usage**

```
is_diann_report(x, .xname = get_name_in_parent(x))

is_fragpipe_tsv(x, .xname = get_name_in_parent(x))

is_maxquant_proteingroups(x, .xname = get_name_in_parent(x))

is_maxquant_phosphosites(x, .xname = get_name_in_parent(x))

is_compounddiscoverer_output(x, .xname = get_name_in_parent(x))

assert_diann_report(x, .xname = get_name_in_parent(x))

assert_fragpipe_tsv(x, .xname = get_name_in_parent(x))

assert_maxquant_proteingroups(x, .xname = get_name_in_parent(x))

assert_maxquant_phosphosites(x, .xname = get_name_in_parent(x))

assert_compounddiscoverer_output(x, .xname = get_name_in_parent(x))
```

**Arguments**

|        |           |
|--------|-----------|
| x      | file      |
| .xname | name of x |

**Examples**

```
file <- NULL
is_diann_report(file)
is_fragpipe_tsv(file)
is_maxquant_proteingroups(file)
is_maxquant_phosphosites(file)

file <- 3
is_diann_report(file)
is_fragpipe_tsv(file)
is_maxquant_proteingroups(file)
is_maxquant_phosphosites(file)

file <- 'blabla.tsv'
is_diann_report(file)
is_fragpipe_tsv(file)

|         |                   |
|---------|-------------------|
| is_file | <i>Is a file?</i> |
|---------|-------------------|

---

**Description**

Is a file (and not a dir)

**Usage**

```
is_file(file)
```

**Arguments**

|      |          |
|------|----------|
| file | filepath |
|------|----------|

**Details**

This function distinguishes between dir and file. Others don't: `is.file`, `fs::file_exists`, `assertive::is_existing_file`

Examples

```
dir <- tempdir(); dir.create(dir, showWarnings = FALSE)
file <- tempfile(); invisible(file.create(file))
is_file(dir)
is_file(file)
```

---

|             |                    |
|-------------|--------------------|
| is_fraction | <i>Is fraction</i> |
|-------------|--------------------|

---

Description

Is fraction

Usage

```
is_fraction(x, .xname = get_name_in_parent(x))

assert_is_fraction(x, .xname = get_name_in_parent(x))
```

Arguments

|        |        |
|--------|--------|
| x      | number |
| .xname | string |

Value

TRUE or false

Examples

```
is_fraction(0.1)      # YES
is_fraction(1)        # YES
is_fraction(1.2)      # NO - more than 1
is_fraction(c(0.1, 0.2)) # NO - vector
```

---

|            |                           |
|------------|---------------------------|
| is_imputed | <i>Get/set is_imputed</i> |
|------------|---------------------------|

---

Description

Get/Set is\_imputed

**Usage**

```

is_imputed(object)

## S4 method for signature 'SummarizedExperiment'
is_imputed(object)

is_imputed(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
is_imputed(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,NULL'
is_imputed(object) <- value

```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| value  | matrix               |

**Value**

matrix (get) or updated object (set)

**Examples**

```

file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file, impute = TRUE)
sum(is_imputed(object))

```

---

|                    |                           |
|--------------------|---------------------------|
| is_positive_number | <i>Is positive number</i> |
|--------------------|---------------------------|

---

**Description**

Is positive number

**Usage**

```

is_positive_number(x, .xname = get_name_in_parent(x))

assert_positive_number(x, .xname = get_name_in_parent(x))

is_weakly_positive_number(x, .xname = get_name_in_parent(x))

assert_weakly_positive_number(x, .xname = get_name_in_parent(x))

```

**Arguments**

|        |           |
|--------|-----------|
| x      | number    |
| .xname | name of x |

**Value**

TRUE or false

**Examples**

```
is_positive_number( 3)
is_positive_number(-3)
is_positive_number( 0)
is_weakly_positive_number(0)
assert_positive_number(3)
```

---

|                  |                         |
|------------------|-------------------------|
| is_scalar_subset | <i>Is scalar subset</i> |
|------------------|-------------------------|

---

**Description**

Is scalar subset

**Usage**

```
is_scalar_subset(
  x,
  y,
  .xname = get_name_in_parent(x),
  .yname = get_name_in_parent(y)
)

assert_scalar_subset(
  x,
  y,
  .xname = get_name_in_parent(x),
  .yname = get_name_in_parent(y)
)
```

**Arguments**

|        |                      |
|--------|----------------------|
| x      | scalar               |
| y      | SummarizedExperiment |
| .xname | name of x            |
| .yname | name of y            |

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
is_scalar_subset('subgroup', svars(object))
is_scalar_subset('subject', svars(object))
assert_scalar_subset('subgroup', svars(object))
```

---

|        |                        |
|--------|------------------------|
| is_sig | <i>Is significant?</i> |
|--------|------------------------|

---

**Description**

Is significant?

**Usage**

```
is_sig(
  object,
  fit = fits(object)[1],
  contrast = coefs(object),
  quantity = "fdr"
)
```

**Arguments**

|          |                                               |
|----------|-----------------------------------------------|
| object   | SummarizedExperiment                          |
| fit      | subset of autonomics::TESTS                   |
| contrast | subset of colnames(metadata(object)[[fit]])   |
| quantity | value in dimnames(metadata(object)[[fit]])[3] |

**Value**

matrix: -1 (downregulated), +1 (upregulatd), 0 (not fdr significant)

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
object %<>% fit_lm()
object %<>% fit_limma()
issig <- is_sig(object, fit = c('lm', 'limma'), contrast = 'Adult-X30dpt')
plot_contrast_venn(issig)
```

---

|                  |                         |
|------------------|-------------------------|
| is_valid_formula | <i>Is valid formula</i> |
|------------------|-------------------------|

---

**Description**

Is valid formula

**Usage**

```
is_valid_formula(  
  x,  
  y,  
  .xname = get_name_in_parent(x),  
  .yname = get_name_in_parent(y)  
)  
  
assert_valid_formula(  
  x,  
  y,  
  .xname = get_name_in_parent(x),  
  .yname = get_name_in_parent(y)  
)
```

**Arguments**

|        |                      |
|--------|----------------------|
| x      | formula              |
| y      | SummarizedExperiment |
| .xname | string               |
| .yname | string               |

**Value**

TRUE or false

**Examples**

```
object <- matrix(1:9, nrow = 3)  
rownames(object) <- sprintf('f%d', 1:3)  
colnames(object) <- sprintf('s%d', 1:3)  
object <- list(exprs = object)  
object %<>% SummarizedExperiment::SummarizedExperiment()  
object$group <- 'group0'  
object$subgroup <- c('A', 'B', 'C')  
svars(object)  
  is_valid_formula( 'condition', object) # not formula  
  is_valid_formula( ~condition, object) # not svar  
  is_valid_formula( ~group, object) # not multilevel
```

```

is_valid_formula( ~subgroup,    object) # TRUE
is_valid_formula( ~0+subgroup,  object) # TRUE
is_valid_formula( ~1,          object) # TRUE
assert_valid_formula( ~subgroup, object)

```

---

keep\_connected\_blocks *Keep fully connected blocks*

---

## Description

Keep fully connected blocks

## Usage

```
keep_connected_blocks(object, block, verbose = TRUE)
```

## Arguments

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| block   | svar                 |
| verbose | TRUE or FALSE        |

## Examples

```

file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% keep_connected_blocks( block = 'Subject')

```

---

keep\_connected\_features  
*Keep features with n+ connected blocks*

---

## Description

Keep features with n+ connected blocks

## Usage

```
keep_connected_features(object, block, n = 2, verbose = TRUE)
```

## Arguments

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| block   | svar                 |
| n       | number               |
| verbose | TRUE or FALSE        |

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% keep_connected_blocks( block = 'Subject')
object %<>% keep_connected_features(block = 'Subject')
```

---

|                                 |
|---------------------------------|
| keep_replicated_features        |
| <i>Keep replicated features</i> |

---

**Description**

Keep features replicated for each slevel

**Usage**

```
keep_replicated_features(object, formula = ~1, n = 3, verbose = TRUE)
```

**Arguments**

|         |                           |
|---------|---------------------------|
| object  | SummarizedExperiment      |
| formula | formula                   |
| n       | min replications required |
| verbose | TRUE or FALSE             |

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% keep_replicated_features()
object %<>% keep_replicated_features(~ subgroup)
```

---

|             |                                    |
|-------------|------------------------------------|
| label2index | <i>Convert labels into indices</i> |
|-------------|------------------------------------|

---

**Description**

Convert labels into indices

**Usage**

```
label2index(x)
```

**Arguments**

|   |             |
|---|-------------|
| x | ‘character’ |
|---|-------------|

Examples

```
label2index(x = 'Reporter intensity 0 WT(0).KD(1).OE(2).R1')
label2index(x = 'Reporter intensity 1 WT(1).KD(2).OE(3).R1')
label2index(x = 'Reporter intensity 0 WT(126).KD(127).OE(128).R1')
label2index(x = 'Reporter intensity 1 WT(126).KD(127).OE(128).R1')
label2index(x = 'Reporter intensity 1 Mix1')
```

---

|               |                                |
|---------------|--------------------------------|
| LINMODENGINES | <i>Linear Modeling Engines</i> |
|---------------|--------------------------------|

---

Description

Linear Modeling Engines

Usage

```
LINMODENGINES
```

Format

An object of class character of length 5.

Examples

```
LINMODENGINES
```

---

|          |                       |
|----------|-----------------------|
| list2mat | <i>list to matrix</i> |
|----------|-----------------------|

---

Description

list to matrix

Usage

```
list2mat(x)
```

Arguments

x                      list

Value

matrix

Examples

```
x <- list(roundfruit = c('apple', 'orange'), redfruit = c('apple', 'strawberry'))
list2mat(x)
```

---

|            |                   |
|------------|-------------------|
| list_files | <i>list files</i> |
|------------|-------------------|

---

**Description**

list.files for programming

**Usage**

```
list_files(dir, full.names)
```

**Arguments**

|            |               |
|------------|---------------|
| dir        | directory     |
| full.names | TRUE or FALSE |

**Details**

Adds a small layer on list.files. Returning NULL rather than character(0) when no files. Making it better suited for programming.

---

|            |                           |
|------------|---------------------------|
| log2counts | <i>Get/Set log2counts</i> |
|------------|---------------------------|

---

**Description**

Get / Set log2counts matrix

**Usage**

```
log2counts(object)

## S4 method for signature 'SummarizedExperiment'
log2counts(object)

log2counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2counts(object) <- value
```

**Arguments**

|        |                                       |
|--------|---------------------------------------|
| object | SummarizedExperiment                  |
| value  | log2count matrix (features x samples) |

**Value**

log2count matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.rnaccounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
log2counts(object)[1:3, 1:3]
log2counts(object) <- values(object)
```

---

|         |                        |
|---------|------------------------|
| log2cpm | <i>Get/Set log2cpm</i> |
|---------|------------------------|

---

**Description**

Get / Set log2cpm matrix

**Usage**

```
log2cpm(object)

## S4 method for signature 'SummarizedExperiment'
log2cpm(object)

log2cpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2cpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2cpm(object) <- value
```

**Arguments**

|        |                                     |
|--------|-------------------------------------|
| object | SummarizedExperiment                |
| value  | log2cpm matrix (features x samples) |

**Value**

log2cpm matrix (get) or updated object (set)

Examples

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
log2cpm(object)[1:3, 1:3]
log2cpm(object) <- values(object)
```

---

|           |                          |
|-----------|--------------------------|
| log2diffs | <i>Get/Set log2diffs</i> |
|-----------|--------------------------|

---

Description

Get/Set log2diffs

Usage

```
log2diffs(object)

## S4 method for signature 'SummarizedExperiment'
log2diffs(object)

log2diffs(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2diffs(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2diffs(object) <- value
```

Arguments

|        |                                       |
|--------|---------------------------------------|
| object | SummarizedExperiment                  |
| value  | occupancy matrix (features x samples) |

Value

occupancy matrix (get) or updated object (set)

Examples

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
log2diffs(object)[1:3, 1:3]
```

---

|              |                             |
|--------------|-----------------------------|
| log2proteins | <i>Get/Set log2proteins</i> |
|--------------|-----------------------------|

---

**Description**

Get/Set log2proteins

**Usage**

```
log2proteins(object)

## S4 method for signature 'SummarizedExperiment'
log2proteins(object)

log2proteins(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2proteins(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2proteins(object) <- value
```

**Arguments**

|        |                                       |
|--------|---------------------------------------|
| object | SummarizedExperiment                  |
| value  | occupancy matrix (features x samples) |

**Value**

occupancy matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
log2proteins(object)[1:3, 1:3]
```

---

|           |                          |
|-----------|--------------------------|
| log2sites | <i>Get/Set log2sites</i> |
|-----------|--------------------------|

---

**Description**

Get/Set log2sites

**Usage**

```
log2sites(object)

## S4 method for signature 'SummarizedExperiment'
log2sites(object)

log2sites(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2sites(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2sites(object) <- value
```

**Arguments**

|        |                                       |
|--------|---------------------------------------|
| object | SummarizedExperiment                  |
| value  | occupancy matrix (features x samples) |

**Value**

occupancy matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
log2sites(object)[1:3, 1:3]
```

---

log2tpm

*Get/Set log2tpm*

---

**Description**

Get / Set log2tpm matrix

**Usage**

```
log2tpm(object)

## S4 method for signature 'SummarizedExperiment'
log2tpm(object)

log2tpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2tpm(object) <- value
```

```
## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2tpm(object) <- value
```

Arguments

object                    SummarizedExperiment  
value                    log2tpm matrix (features x samples)

Value

log2tpm matrix (get) or updated object (set)

Examples

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
log2tpm(object) <- values(object)
log2tpm(object)[1:3, 1:3]
```

---

|               |                         |
|---------------|-------------------------|
| log2transform | <i>Transform values</i> |
|---------------|-------------------------|

---

Description

Transform values

Usage

```
log2transform(  
  object,  
  assay = assayNames(object)[1],  
  pseudo = 0,  
  verbose = FALSE  
)  
  
exp2(object, verbose = FALSE)  
  
zscore(object, verbose = FALSE)  
  
sscale(mat, verbose = FALSE)  
  
fscale(mat, verbose = FALSE)  
  
quantnorm(object, verbose = FALSE)  
  
invnorm(object, verbose = FALSE)  
  
vsn(object, verbose = FALSE, delog = TRUE)
```

**Arguments**

|         |                                                               |
|---------|---------------------------------------------------------------|
| object  | SummarizedExperiment                                          |
| assay   | character vector : assays for which to perform transformation |
| pseudo  | number : pseudo value to be added prior to transformation     |
| verbose | TRUE or FALSE : whether to msg                                |
| mat     | matrix                                                        |
| delog   | TRUE or FALSE (vsn)                                           |

**Value**

Transformed sumexp

**Examples**

```

file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)

object %>% plot_sample_densities()
invnorm(object) %>% plot_sample_densities()

object %>% plot_sample_densities()
quantnorm(object) %>% plot_sample_densities()

object %>% plot_sample_densities()
#vsn(object) %>% plot_sample_densities() # dataset too small

object %>% plot_sample_densities()
zscore(object) %>% plot_sample_densities()

object %>% plot_sample_densities()
exp2(object) %>% plot_sample_densities()
log2transform(exp2(object)) %>% plot_sample_densities()

```

---

logical2factor

*logical to factor*

---

**Description**

logical to factor

**Usage**

```

logical2factor(x, true = get_name_in_parent(x), false = paste0("not", true))

factor2logical(x)

```

**Arguments**

|       |                     |
|-------|---------------------|
| x     | logical vector      |
| true  | string : truelevel  |
| false | string : falselevel |

**Value**

factor

**Examples**

```
t1up <- c( TRUE,  FALSE,  TRUE)
t1   <- c('flat', 'down', 'up' ) %>% factor(., .)
t1up
logical2factor(t1up)
factor2logical(t1)
```

---

|                    |                           |
|--------------------|---------------------------|
| make_alpha_palette | <i>Make alpha palette</i> |
|--------------------|---------------------------|

---

**Description**

Make alpha palette

**Usage**

```
make_alpha_palette(object, alpha)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| alpha  | string               |

**Value**

character vector

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
make_alpha_palette(object, 'Time')
```

---

|             |                    |
|-------------|--------------------|
| make_colors | <i>Make colors</i> |
|-------------|--------------------|

---

**Description**

Make colors

**Usage**

```
make_colors(  
  varlevels,  
  sep = guess_sep(varlevels),  
  show = FALSE,  
  verbose = FALSE  
)
```

**Arguments**

- varlevels      character vector
- sep            string
- show           TRUE or FALSE: whether to plot
- verbose        TRUE or FALSE: whether to msg

**Examples**

```
make_colors(c('A', 'B', 'C', 'D' ), show = TRUE)  
make_colors(c('A.1', 'B.1', 'A.2', 'B.2'), show = TRUE)
```

---

|                 |                                 |
|-----------------|---------------------------------|
| make_volcano_dt | <i>Create volcano datatable</i> |
|-----------------|---------------------------------|

---

**Description**

Create volcano datatable

**Usage**

```
make_volcano_dt(  
  object,  
  fit = fits(object)[1],  
  coefs = coefs(object, fit = fit)[1],  
  shape = "imputed",  
  size = NULL,  
  alpha = NULL,  
  label = "feature_id"  
)
```

**Arguments**

|        |                                                     |
|--------|-----------------------------------------------------|
| object | SummarizedExperiment                                |
| fit    | 'limma', 'lme', 'lm', 'wilcoxon'                    |
| coefs  | character vector: coefs for which to plot volcanoes |
| shape  | fvar or NULL                                        |
| size   | fvar or NULL                                        |
| alpha  | fvar or NULL                                        |
| label  | fvar or NULL                                        |

**Value**

data.table

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file, impute = TRUE, fit = 'limma')
make_volcano_dt(object, fit = 'limma', coefs = 'Adult-X30dpt')
```

---

|             |                    |
|-------------|--------------------|
| map_fvalues | <i>Map fvalues</i> |
|-------------|--------------------|

---

**Description**

Map fvalues

**Usage**

```
map_fvalues(object, fvalues, from = "uniprot", to = "feature_id", sep = ";")
```

**Arguments**

|         |                           |
|---------|---------------------------|
| object  | SummarizedExperiment      |
| fvalues | uncollapsed string vector |
| from    | string (fvar)             |
| to      | string (svar)             |
| sep     | collapse separator        |

**Value**

string vector

Examples

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
fdt(object)
map_fvalues(object, c('Q6DHL5', 'Q6PFS7'), from = 'uniprot', to = 'feature_id', sep = ';')
```

---

|               |                                                 |
|---------------|-------------------------------------------------|
| matrix2sumexp | <i>Convert matrix into SummarizedExperiment</i> |
|---------------|-------------------------------------------------|

---

Description

Convert matrix into SummarizedExperiment

Usage

```
matrix2sumexp(x, verbose = TRUE)
```

Arguments

|         |            |
|---------|------------|
| x       | matrix     |
| verbose | TRUE/FALSE |

Value

SummarizedExperiment

Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
x <- values(read_metabolon(file))
object <- matrix2sumexp(x)
object %<>% pca()
biplot(object, color = 'subgroup')
```

---

|-------------------|-----------------------------------|
| MAXQUANT_PATTERNS | <i>maxquant quantity patterns</i> |
|-------------------|-----------------------------------|

---

Description

maxquant quantity patterns

Usage

```
MAXQUANT_PATTERNS
```

**Format**

An object of class character of length 7.

**Examples**

MAXQUANT\_PATTERNS

---

|         |                                       |
|---------|---------------------------------------|
| mdsplot | <i>Feature correlations/distances</i> |
|---------|---------------------------------------|

---

**Description**

Feature correlations/distances

**Usage**

```
mdsplot(distmat, title = NULL)

fcor(object, verbose = TRUE)

scor(object, verbose = TRUE)

fdist(object, method = "cor")

sdist(object, method = "cor")
```

**Arguments**

|         |                         |
|---------|-------------------------|
| distmat | distance matrix         |
| title   | NULL or string          |
| object  | SummarizedExperiment    |
| verbose | TRUE or FALSE           |
| method  | 'cor', 'euclidian', etc |

**Value**

matrix

**Examples**

```
# Correlations
object <- twofactor_sumexp()
scor(object) %>% pheatmap::pheatmap()
fcor(object) %>% pheatmap::pheatmap()
# Distances
sdist(object, 'cor') %>% mdsplot('samples: cor')
sdist(object, 'euclidian') %>% mdsplot('samples: euclidian')
```

```
fdist(object, 'cor')           %>% mdsplot('features: cor')
fdist(object, 'euclidian') %>% mdsplot('features: euclidian')
```

---

|                          |                                        |
|--------------------------|----------------------------------------|
| merge_compounddiscoverer | <i>merge compound discoverer files</i> |
|--------------------------|----------------------------------------|

---

**Description**

merge compound discoverer files

**Usage**

```
merge_compounddiscoverer(x, quantity = NULL, verbose = TRUE)
```

**Arguments**

|          |                            |
|----------|----------------------------|
| x        | ‘list‘                     |
| quantity | ‘‘area’, ‘normalizedarea’‘ |
| verbose  | ‘TRUE‘ or ‘FALSE‘          |

**Value**

‘data.table‘

---

|                    |                           |
|--------------------|---------------------------|
| merge_sample_excel | <i>Merge sample excel</i> |
|--------------------|---------------------------|

---

**Description**

Merge sample excel

**Usage**

```
merge_sample_excel(
  object,
  sfile,
  range = NULL,
  by.x = "sample_id",
  by.y = "sample_id"
)
```

Arguments

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| sfile  | sample file          |
| range  | string               |
| by.x   | string               |
| by.y   | string               |

Value

SummarizedExperiment

---

|                   |                                    |
|-------------------|------------------------------------|
| merge_sample_file | <i>Merge sample / feature file</i> |
|-------------------|------------------------------------|

---

Description

Merge sample / feature file

Usage

```
merge_sample_file(  
  object,  
  sfile = NULL,  
  by.x = "sample_id",  
  by.y = "sample_id",  
  all.x = TRUE,  
  select = NULL,  
  stringsAsFactors = FALSE,  
  verbose = TRUE  
)

Value

SummarizedExperiment

Examples

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
subgroups <- c('E00', 'E01', 'E02', 'E05', 'E15', 'E30', 'M00')
subgroups %<>% paste0('_STD')
object <- read_maxquant_proteingroups(file, subgroups = subgroups)
sfile <- paste0(tempdir(), '/', basename(tools::file_path_sans_ext(file)))
sfile %<>% paste0('.samples.txt')
dt <- data.table(sample_id = object$sample_id,
                 day = split_extract_fixed(object$subgroup, '_', 1))
data.table::fwrite(dt, sfile)
sdt(object)
sdt(merge_sample_file(object, sfile))
```

---

|             |                                |
|-------------|--------------------------------|
| merge_sdata | <i>Merge sample/feature dt</i> |
|-------------|--------------------------------|

---

Description

Merge sample/feature dt

Usage

```
merge_sdata(
  object,
  dt,
  by.x = "sample_id",
  by.y = names(dt)[1],
  all.x = TRUE,
```

```
    verbose = TRUE
  )

merge_sdt(
  object,
  dt,
  by.x = "sample_id",
  by.y = "sample_id",
  all.x = TRUE,
  verbose = TRUE
)

merge_fdata(
  object,
  dt,
  by.x = "feature_id",
  by.y = names(dt)[1],
  all.x = TRUE,
  verbose = TRUE
)

merge_fdt(
  object,
  dt,
  by.x = "feature_id",
  by.y = "feature_id",
  all.x = TRUE,
  verbose = TRUE
)
```

### Arguments

|         |                                                                      |
|---------|----------------------------------------------------------------------|
| object  | SummarizedExperiment                                                 |
| dt      | data.frame, data.table, DataFrame                                    |
| by.x    | string : object mergevar                                             |
| by.y    | string : df mergevar                                                 |
| all.x   | TRUE / FALSE : whether to keep samples / features without annotation |
| verbose | TRUE / FALSE : whether to msg                                        |

### Value

SummarizedExperiment

### Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
sdt(object)
```

```
sdt(merge_sdt(object, data.table(sample_id = object$sample_id,
                                number = seq_along(object$sample_id))))
```

---

|            |                          |
|------------|--------------------------|
| message_df | <i>message dataframe</i> |
|------------|--------------------------|

---

**Description**

message dataframe using sprintf syntax. Use place holder ' '

**Usage**

```
message_df(format_string, x)
```

**Arguments**

- format\_string    sprintf style format string
- x                data.frame

**Value**

nothing returned

**Examples**

```
x <- data.frame(feature_id = c('F001', 'F002'), symbol = c('FEAT1', 'FEAT2'))
message_df('\t%s', x)

x <- c(rep('PASS', 25), rep('FAIL', 25))
message_df(format_string = '%s', table(x))
```

---

|          |                           |

**Usage**

nfactors(x, sep = guess\_sep(x))  
  
split\_extract\_fixed(x, sep, i)  
  
split\_extract\_regex(x, sep, i)  
  
split\_extract(x, i, sep = guess\_sep(x))

**Arguments**

|     |                  |
|-----|------------------|
| x   | character vector |
| sep | string           |
| i   | integer          |

**Value**

character vector

Examples

```
# Read
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
x <- object$sample_id[1:5]
nfactors(x)

# Split
split_extract_fixed(x, '.', 1:2)
split_extract_fixed(x, '.', seq_len(nfactors(x)-1))
split_extract_fixed(x, '.', nfactors(x))
split_extract_fixed(fdt(object)$PUBCHEM, ';', 1) # with NA values
```

|----------------|------------------------|
| OPENTARGETSDIR | <i>opentargets dir</i> |
|----------------|------------------------|

---

Description

opentargets dir

Usage

OPENTARGETSDIR

Format

An object of class character of length 1.

---

|            |                   |
|------------|-------------------|
| order_on_p | <i>Order on p</i> |
|------------|-------------------|

---

Description

Order on p

Usage

```
order_on_p(
  object,
  fit = autonomics::fits(object),
  coefs = autonomics::coefs(object, fit = fit),
  combiner = "|",
  decreasing = FALSE,
  verbose = TRUE
)

order_on_t(
```

```

    object,
    fit = autonomics::fits(object),
    coefs = autonomics::coefs(object, fit = fit),
    combiner = "|",
    decreasing = FALSE,
    verbose = TRUE
  )

order_on_effect(
  object,
  fit = autonomics::fits(object),
  coefs = autonomics::coefs(object, fit = fit),
  combiner = "|",
  verbose = TRUE
)

```

### Arguments

|            |                                          |
|------------|------------------------------------------|
| object     | SummarizedExperiment                     |
| fit        | string vector: subset of 'fits(object)'  |
| coefs      | string vector: subset of 'coefs(object)' |
| combiner   | ' ' or '&'                               |
| decreasing | TRUE or FALSE                            |
| verbose    | TRUE or FALSE                            |

### Value

SummarizedExperiment

### Examples

```

# Linmod
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
order_on_p(object)
object %<>% fit_limma()
order_on_p(object)

# Survival
object <- survival_example()
object %<>% fit_survival()
order_on_p(object)

```

---

pca

*PCA, SMA, LDA, PLS, SPLS, OPLS*

---

### Description

Perform a dimension reduction. Store sample scores, feature loadings, and dimension variances.

### Usage

```
pca(  
  object,  
  by = "sample_id",  
  assay = assayNames(object)[1],  
  ndim = 2,  
  sep = FITSEP,

**Value**

ggplot

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
subgroups <- paste0(c('E00', 'E01', 'E02', 'E05', 'E15', 'E30', 'M00'), '_STD')
object <- read_maxquant_proteingroups(file, subgroups = subgroups)
object$subgroup %<>% substr(1,3)
plot_design(object)
```

---

|                 |                                               |
|-----------------|-----------------------------------------------|
| plot_detections | <i>Plot missingness per sample / subgroup</i> |
|-----------------|-----------------------------------------------|

---

**Description**

`plot_sample_nas` shows systematic and random missingness (white), and full detection (bright color) at sample resolution. Imputations are also shown (light color).

**Usage**

```
plot_detections(...)

plot_summarized_detections(...)

plot_sample_nas(
  object,
  by = "subgroup",
  fill = by,
  palette = make_svar_palette(object, fill),
```

```

    axis.text.y = element_blank()
  )

  plot_subgroup_nas(
    object,
    by = "subgroup",
    fill = by,
    palette = NULL,
    na_imputes = TRUE
  )

```

### Arguments

|             |                                                |
|-------------|------------------------------------------------|
| ...         | used to maintain deprecated functions          |
| object      | SummarizedExperiment                           |
| by          | svar (string)                                  |
| fill        | svar (string)                                  |
| palette     | color vector (names = levels, values = colors) |

```

---

## Description

diann precursor quantity

## Usage

```
PRECURSOR_QUANTITY
```

## Format

An object of class character of length 1.

---

```
preprocess_rnaseq_counts
      Preprocess RNAseq counts
```

---

## Description

Preprocess RNAseq counts

**Usage**

```
preprocess_rnaseq_counts(  
  object,  
  formula = ~subgroup,  
  block = NULL,  
  min_count = 10,  
  pseudo = 0.5,  
  tpm = FALSE,  
  cpm = TRUE,  
  voom = TRUE,  
  log2 = TRUE,  
  verbose = TRUE,  
  plot = TRUE  
)
```

**Arguments**

|           |                                                                    |
|-----------|--------------------------------------------------------------------|
| object    | SummarizedExperiment                                               |
| formula   | designmat formula                                                  |
| block     | block svar                                                         |
| min_count | min count required in some samples                                 |
| pseudo    | added pseudocount to avoid $\log(x)=-\text{Inf}$                   |
| tpm       | TRUE or FALSE : tpm normalize?                                     |
| cpm       | TRUE or FALSE : cpm normalize? (counts per million (scaled) reads) |
| voom      | TRUE or FALSE : voom weight?                                       |

## Value

SummarizedExperiment

---

|               |                      |
|---------------|----------------------|
| read_fragpipe | <i>Read fragpipe</i> |
|---------------|----------------------|

---

**Description**

Read fragpipe

**Usage**

```
read_fragpipe(  
  dir = getwd(),  
  file = if (is_file(dir)) dir else file.path(dir, "combined_protein.tsv"),  
  contaminants = FALSE,  
  verbose = TRUE  
)
```

**Arguments**

- dir                directory with 'combined\_protein.tsv'
- file              'combined\_protein.tsv' (full path)
- contaminants     whether to include contaminants
- verbose           whether to msg

**Value**

SummarizedExperiment

**Examples**

```
file <- download_data('multiorganism.combined_protein.tsv')  
object <- read_fragpipe(file = file)  
object  
fdt(object)  
sdt(object)
```

|              |                        |
|--------------|------------------------|
| read_uniprot | <i>Read fasta hdrs</i> |
|--------------|------------------------|

---

**Description**

Read fasta hdrs

**Usage**

```
read_uniprot(fastafile, fastafields = FASTAFIELDS, verbose = TRUE)

parse_maxquant_hdrs(fastahdrs)

read_contaminant(force = FALSE, verbose = TRUE)
```

**Arguments**

|             |                                                       |
|-------------|-------------------------------------------------------|
| fastafile   | string (or character vector)                          |
| fastafields | character vector : which fastahdr fields to extract ? |
| verbose     | bool                                                  |
| fastahdrs   | character vector                                      |
| force       | whether to overwrite existing file                    |

**Value**

data.table(uniprot, protein, gene, uniprot, reviewed, existence)

**Note**

existence values are always those of the canonical isoform (no isoform-level resolution for this field)

**Examples**

```
# uniprot hdrs
fastafile <- system.file('extdata/uniprot_hsa_20140515.fasta', package = 'autonomics')
read_uniprot_dt(fastafile)

# maxquant hdrs

|           |                  |
|-----------|------------------|
| reset_fit | <i>Reset fit</i> |
|-----------|------------------|

---

**Description**

Reset fit

**Usage**

```
reset_fit(  
  object,  
  fit = fits(object),  
  coefs = autonomics::coefs(object, fit = fit),  
  verbose = TRUE  
)
```

**Arguments**

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| fit     | character vector     |
| coefs   | character vector     |
| verbose | TRUE or FALSE        |

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')  
(object <- read_metabolon(file))  
object %<>% reset_fit()  
object %<>% fit_limma() %>% reset_fit()  
object %<>% fit_limma() %>% fit_lm() %>% reset_fit()  
object %<>% fit_limma() %>% fit_lm() %>% reset_fit('limma')
```

---

|                       |                        |
|-----------------------|------------------------|
| rm_diann_contaminants | <i>Rm contaminants</i> |
|-----------------------|------------------------|

---

**Description**

Rm contaminants from DIA-NN SumExp

**Usage**

```
rm_diann_contaminants(object, verbose = TRUE)
```

**Arguments**

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| verbose | TRUE or FALSE        |

**Value**

SummarizedExperiment

**Examples**

```
file <- download_data('dilution.report.tsv')
object <- read_diann_proteingroups(file)
object %<>% rm_diann_contaminants()
```

---

rm\_missing\_in\_all\_samples

*Rm features missing in some samples*

---

**Description**

Rm features missing in some samples

**Usage**

```
rm_missing_in_all_samples(object, verbose = TRUE)

rm_missing_in_some_samples(object, verbose = TRUE)
```

**Arguments**

|         |                         |
|---------|-------------------------|
| object  | SummarizedExperiment    |
| verbose | TRUE (default) or FALSE |

**Value**

updated object

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
rm_missing_in_all_samples( object)
rm_missing_in_some_samples(object)
```

---

rm\_unmatched\_samples    *rm unmatched/singleton samples*

---

## Description

rm unmatched/singleton samples

## Usage

```
rm_unmatched_samples(  
  object,  
  subgroupvar = "subgroup",  
  subgroupctr = slevels(object, subgroupvar)[1],  
  block,  
  verbose = TRUE  
)  
  
rm_singleton_samples(object, subgroupvar = "subgroup", verbose = TRUE)
```

## Arguments

|             |                            |
|-------------|----------------------------|
| object      | SummarizedExperiment       |
| subgroupvar | subgroup variable (string) |
| subgroupctr | control subgroup (string)  |
| block       | block variable (string)    |
| verbose     | TRUE/FALSE                 |

## Value

SummarizedExperiment

## Examples

```
file <- system.file('extdata/atkin.somascan.adat', package = 'autonomics')  
object <- read_somascan(file)  
object %<>% filter_samples(subgroup %in% c('t1', 't2'), verbose = TRUE)  
rm_singleton_samples(object, subgroupvar = 'Subject')  
rm_unmatched_samples(object, subgroupvar = 'subgroup', block = 'Subject')
```

---

|                |                                |
|----------------|--------------------------------|
| scaledlibsizes | <i>Get tmm-scaled libsizes</i> |
|----------------|--------------------------------|

---

**Description**

Get tmm-scaled libsizes

**Usage**

scaledlibsizes(counts)

**Arguments**

counts                  counts matri

**Value**

scaled libsize vector

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
scaledlibsizes(counts(object))
```

---

|          |                                |
|----------|--------------------------------|
| scoremat | <i>Extract scores/loadings</i> |
|----------|--------------------------------|

---

**Description**

Extract scores/loadings

**Usage**

```
scoremat(object, method = "pca", by = biplot_by(object, method), dim = 1:2)

scores(object, method = "pca", by = biplot_by(object, method), dim = 1)

loadingmat(object, method = "pca", by = biplot_by(object, method), dim = 1:2)

loadings(object, method = "pca", by = biplot_by(object, method), dim = 1)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| method | 'pca', 'pls', etc.   |
| by     | svar (string)        |
| dim    | numeric vector       |

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% pca()
  scores(object)[1:2]
  loadings(object)[1:2]
  scoremat(object)[1:2, ]
  loadingmat(object)[1:2, ]
```

---

|         |                    |
|---------|--------------------|
| slevels | <i>Get slevels</i> |
|---------|--------------------|

---

**Description**

Get svar levels

**Usage**

```
slevels(object, svar)

subgroup_levels(object)
```

**Arguments**

|        |                                      |
|--------|--------------------------------------|
| object | SummarizedExperiment, eSet, or eList |
| svar   | sample var (character)               |

**Value**

svar values (character)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
slevels(object, 'subgroup')
subgroup_levels(object)
```

---

|        |                       |
|--------|-----------------------|
| snames | <i>Get/Set snames</i> |
|--------|-----------------------|

---

**Description**

Get/Set sample names

**Usage**

```
snames(object)

## S4 method for signature 'SummarizedExperiment'
snames(object)

snames(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,character'
snames(object) <- value
```

**Arguments**

|        |                                 |
|--------|---------------------------------|
| object | SummarizedExperiment            |
| value  | string vector with sample names |

**Value**

sample names vector (get) or updated eSet (set)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
head(snames(object))
head(snames(object) %<>% paste0('SAMPLE_', .))
```

---

|               |                      |
|---------------|----------------------|
| split_samples | <i>Split samples</i> |
|---------------|----------------------|

---

**Description**

Split samples by svar

**Usage**

```
split_samples(object, by = "subgroup")

cbind_imputed(objlist)

split_features(object, by)
```

**Arguments**

|         |                           |
|---------|---------------------------|
| object  | SummarizedExperiment      |
| by      | svar to split by (string) |
| objlist | SummarizedExperiment list |

**Value**

SummarizedExperiment list

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
objlist <- split_features(object, by = 'PLATFORM')
objlist <- split_samples(object, 'Diabetes')
objlist %<>% Map(impute, .)
object <- cbind_imputed(objlist)
```

---

|                |                                     |
|----------------|-------------------------------------|
| stri_any_regex | <i>Does any string have a regex</i> |
|----------------|-------------------------------------|

---

**Description**

Does any string have a regex

**Usage**

```
stri_any_regex(str, pattern)
```

**Arguments**

|         |               |
|---------|---------------|
| str     | string vector |
| pattern | string        |

**Value**

TRUE or FALSE

**Examples**

```
str <- c('s1 Spectral Count', 's1 Unique Spectral Count')
patterns <- c('Spectral Count', '(?!Unique) Spectral Count', 'Intensity')
stringi::stri_detect_regex(str, pattern = patterns[1])
stringi::stri_detect_regex(str, pattern = patterns[2])
stringi::stri_detect_regex(str, pattern = patterns[3])
stri_any_regex(str, pattern = patterns)
```

---

stri\_detect\_fixed\_in\_collapsed

*Detect fixed patterns in collapsed strings*

---

**Description**

Detect fixed patterns in collapsed strings

**Usage**

```
stri_detect_fixed_in_collapsed(x, patterns, sep)
```

**Arguments**

|          |                                                      |
|----------|------------------------------------------------------|
| x        | vector with collapsed strings                        |
| patterns | vector with fixed patterns (strings)                 |
| sep      | collapse separator (string) or NULL (if uncollapsed) |

**Value**

boolean vector

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
x <- fdt(object)$uniprot
patterns <- c('A0A0R4IKT8', 'Q7T3G6')
table(stri_detect_fixed_in_collapsed(x = x, patterns = patterns, sep = ';'))
```

---

|                |                            |
|----------------|----------------------------|
| subgroup_array | <i>Get subgroup matrix</i> |
|----------------|----------------------------|

---

**Description**

Arrange (subgroup)levels in matrix

**Usage**

```
subgroup_array(object, subgroupvar)
subgroup_matrix(object, subgroupvar)
```

**Arguments**

|             |                      |
|-------------|----------------------|
| object      | SummarizedExperiment |
| subgroupvar | subgroup svar        |

**Value**

matrix

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object$subgroup <- paste0(object$Diabetes, '.', object$subgroup)
subgroup_matrix(object, 'subgroup')
```

---

|                   |                          |
|-------------------|--------------------------|
| subtract_baseline | <i>Subtract baseline</i> |
|-------------------|--------------------------|

---

**Description**

Subtract baseline level within block

**Usage**

```
subtract_baseline(
  object,
  subgroupvar,
  subgroupctr = slevels(object, subgroupvar)[1],
  block = NULL,
  assaynames = setdiff(assayNames(object), c("weights", "pepcounts")),
  verbose = TRUE
)
```

```

subtract_pairs(
  object,
  subgroupvar = "subgroup",
  subgroupctr = slevels(object, subgroupvar)[1],
  block,
  assaynames = assayNames(object)[1],
  verbose = TRUE
)

subtract_differences(object, block, subgroupvar, verbose = TRUE)

```

### Arguments

|             |                                                    |
|-------------|----------------------------------------------------|
| object      | SummarizedExperiment                               |
| subgroupvar | subgroup svar                                      |
| subgroupctr | control subgroup                                   |
| block       | block svar (within which subtraction is performed) |
| assaynames  | which assays to subtract for                       |
| verbose     | TRUE/FALSE                                         |

### Details

subtract\_baseline subtracts baseline levels within block, using the medoid baseline sample if multiple exist.

subtract\_pairs also subtracts baseline level within block. It cannot handle multiple baseline samples, but has instead been optimized for many blocks

subtract\_differences subtracts differences between subsequent levels, again within block

### Value

SummarizedExperiment

### Examples

```

# read
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object0 <- read_metabolon(file)
pca(object0, plot = TRUE, color = 'Time')

# subtract_baseline: takes medoid of baseline samples if multiple
object <- subtract_baseline(object0, block = 'Subject', subgroupvar = 'Time')
pca(object, plot = TRUE, color = 'Time')

# subtract_pairs: optimized for many blocks
object <- subtract_pairs(object0, block = 'Subject', subgroupvar = 'Time')

```

```

pca(object, plot = TRUE, color = 'Time')

# subtract_differences
object <- subtract_differences(object0, block = 'Subject', subgroupvar = 'Time')
values(object) %<>% na_to_zero()
pca(object, plot = TRUE, color = 'Time')

```

---

sumexplist\_to\_longdt    *SummarizedExperiment list to long data.table*

---

## Description

SummarizedExperiment list to long data.table

## Usage

```

sumexplist_to_longdt(
  sumexplist,
  svars = intersect("subgroup", autonomics::svars(sumexplist[[1]])),
  fvars = intersect("gene", autonomics::fvars(sumexplist[[1]])),
  setvarname = "set"
)

```

## Arguments

|            |                               |
|------------|-------------------------------|
| sumexplist | list of SummarizedExperiments |
| svars      | character vector              |
| fvars      | character vector              |
| setvarname | string                        |

## Value

data.table

## Examples

```

subgroups <- paste0(c('E00', 'E01', 'E02', 'E05', 'E15', 'E30', 'M00'), '_STD')
rnafile <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
profile <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
fosfile <- system.file('extdata/billing19.phosphosites.txt', package = 'autonomics')
rna <- read_rnaseq_counts(rnafile)
pro <- read_maxquant_proteingroups(file = profile, subgroups = subgroups)
fos <- read_maxquant_phosphosites(fosfile = fosfile, profile = profile, subgroups = subgroups)
pro$subgroup %<>% stringi::stri_replace_first_fixed('_STD', '')
fos$subgroup %<>% stringi::stri_replace_first_fixed('_STD', '')

sumexplist <- list(rna = rna, pro = pro, fos = fos)
dt <- sumexplist_to_longdt(sumexplist, setvarname = 'platform')
dt %<>% extract(gene %in% c('TNMD', 'TSPAN6'))

```

---

|               |                            |
|---------------|----------------------------|
| sumexp_to_tsv | <i>Write sumexp to tsv</i> |
|---------------|----------------------------|

---

**Description**

Write sumexp to tsv

**Usage**

```
sumexp_to_tsv(object, assay = assayNames(object)[1], file)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| assay  | string               |
| file   | filename             |

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file, fit = 'limma')
tsv <- file.path(tempdir(), 'fukuda20.proteingroups.tsv')
sumexp_to_tsv(object, file = tsv)
```

---

|                  |                                           |
|------------------|-------------------------------------------|
| sumexp_to_widedt | <i>SummarizedExperiment to data.table</i> |
|------------------|-------------------------------------------|

---

**Description**

SummarizedExperiment to data.table

**Usage**

```
sumexp_to_widedt(
  object,
  fvars = autonomics::fvars(object),
  assay = assayNames(object)[1]
)

sumexp_to_longdt(
  object,
  fvars = intersect("feature_name", autonomics::fvars(object)),
  svars = intersect("subgroup", autonomics::svars(object)),
  assay = assayNames(object) %>% intersect(c(.[,1], "is_imputed"))
)

sumexp_to_subrep_dt(object, subgroup = subgroup)
```

Arguments

|          |                                      |
|----------|--------------------------------------|
| object   | sumexp                               |
| fvars    | additional fvars to include in table |
| assay    | matrix in assays(object) to be used  |
| svars    | additional svars to include in table |
| subgroup | subgroup (sym)                       |

Details

- sumexp\_to\_widedt: feature x sample
- sumexp\_to\_subrep\_dt: feature.subgroup x replicate
- sumexp\_to\_longdt: feature.sample

Value

data.table

Examples

```
# Atkin Hypoglycemia
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
sumexp_to_widedt(object)
sumexp_to_longdt(object)
sumexp_to_subrep_dt(object)

# Fukuda
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
values(object)
fdt(object)
object %<>% impute()
table(fdt(object)$imputed)
sumexp_to_longdt(object)
sumexp_to_widedt(object)
sumexp_to_longdt(object)
```

---

|               |                      |
|---------------|----------------------|
| summarize_fit | <i>Summarize fit</i> |
|---------------|----------------------|

---

Description

Summarize fit

**Usage**

```

summarize_fit(object, ...)

## S3 method for class 'data.table'
summarize_fit(
  object,
  fit = fits(object),
  coefs = autonomics::coefs(object, fit = fit),
  ...
)

## S3 method for class 'SummarizedExperiment'
summarize_fit(
  object,
  fit = fits(object),
  coefs = autonomics::coefs(object, fit = fit),
  ...
)

```

**Arguments**

|        |                                                 |
|--------|-------------------------------------------------|
| object | SummarizedExperiment or data.table              |
| ...    | S3 dispatch                                     |
| fit    | 'limma', 'lme', 'lm', 'lme', 'wilcoxon' or NULL |
| coefs  | string vector                                   |

**Value**

data.table(contrast, nup, ndown)

**Examples**

```

file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% fit_limma()
object %<>% fit_lm()
summarize_fit(object, coefs = c('t1-t0', 't2-t0', 't3-t0'))

```

---

SURVIVALENGINES

*Survival engines*

---

**Description**

Survival engines

**Usage**

SURVIVALENGINES

**Format**

An object of class character of length 3.

**Examples**

SURVIVALENGINES

---

|                  |                     |
|------------------|---------------------|
| survival_example | <i>Fit survival</i> |
|------------------|---------------------|

---

**Description**

Investigates association between expression and survival

**Usage**

```
survival_example()

fit_survival(
  object,
  ntile = 2,
  engine = c("survdiff", "coxph", "logrank")[1:2],
  assay = assayNames(object)[1],
  sep = FITSEP,
  verbose = TRUE,
  outdir = NULL,
  plot = if (is.null(outdir)) FALSE else TRUE,
  width = 7,
  height = 7,
  n = min(nrow(object), 9),
  ncol = 3,
  nrow = 3,
  writefunname = "write_xl"
)
```

**Arguments**

|        |                                                             |
|--------|-------------------------------------------------------------|
| object | SummarizedExperiment                                        |
| ntile  | number                                                      |
| engine | 'coxph' (survival), 'survdiff' (survival), 'logrank' (coin) |
| assay  | string                                                      |
| sep    | fvar string separator : e.g. '~' gives p~surv~LR50          |

|              |                            |
|--------------|----------------------------|
| verbose      | TRUE or FALSE              |
| outdir       | dir                        |
| plot         | TRUE or FALSE              |
| width        | number                     |
| height       | number                     |
| n            | number of features to plot |
| ncol         | number of cols             |
| nrow         | number of rows             |
| writefunname | 'write_xl' or 'write_ods'  |

### Details

Investigates association between expression and survival.  
 Continuous for coxph.  
 Categorical for survdiff or logrank  
 Samples are split into ntile expression groups.  
 Survival is compared between highest and lowest expressors.

Three statistics recorded per engine

p  
 effect: coef(coxph)  
 mean survival difference (survdiff, logrank)  
 t: z(coxph)  
 $\chi^2$  (survdiff, logrank)  
 sign reflects whether expression  
 increases (positive) or decreases (negative) survival

### Value

SummarizedExperiment

### Examples

```
# Defaults
object <- survival_example()
fit_survival(object)

# Engines
fit_survival(object, engine = c('coxph', 'survdiff'))
fit_survival(object, engine = c('coxph', 'survdiff', 'logrank'))

# Quantiles
fit_survival(object, engine = 'logrank')
fit_survival(object, engine = 'logrank', ntile = 4)

# Plot
fit_survival(object)
fit_survival(object, plot = TRUE)
fit_survival(object, engine = c('coxph', 'survdiff', 'logrank'), plot = TRUE)
```

|---------|------------------------|
| svalues | <i>Get/Set svalues</i> |
|---------|------------------------|

---

**Description**

Get/Set svar values

**Usage**

```
svalues(object, svar)

subgroup_values(object)

sampleid_values(object)

svalues(object, svar) <- value

## S4 replacement method for signature 'SummarizedExperiment,character'
svalues(object, svar) <- value
```

**Arguments**

|        |                        |
|--------|------------------------|
| object | SummarizedExperiment   |
| svar   | sample var (character) |
| value  | value vector           |

**Value**

character vector (get) or SummarizedExperiment (set)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
svalues(object, 'subgroup')
subgroup_values(object)
```

---

|       |                      |
|-------|----------------------|
| svars | <i>Get/Set svars</i> |
|-------|----------------------|

---

**Description**

Get/Set sample variables

**Usage**

```
svars(object)

## S4 method for signature 'SummarizedExperiment'
svars(object)

## S4 method for signature 'MultiAssayExperiment'
svars(object)

svars(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,character'
svars(object) <- value

## S4 replacement method for signature 'MultiAssayExperiment,character'
svars(object) <- value
```

**Arguments**

|        |                                   |
|--------|-----------------------------------|
| object | SummarizedExperiment              |
| value  | string vector with variable names |

**Value**

sample variable names (get) or updated SummarizedExperiment

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
svars(object)[1]
(svars(object)[1] %<>% paste0('1'))
```

---

|                |                                     |
|----------------|-------------------------------------|
| systematic_nas | <i>Is systematic/random/full NA</i> |
|----------------|-------------------------------------|

---

**Description**

Is systematic/random/full NA

**Usage**

```
systematic_nas(object, by = "subgroup", frac = 0.5)

random_nas(object, by = "subgroup")

no_nas(object)
```

Arguments

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| by     | svar (string)        |
| frac   | fraction             |

Examples

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
table(systematic_nas(object)) # missing in some subgroups, present in others
table(random_nas(object))    # missing in some samples, independent of subgroup
table(no_nas(object))        # missing in no samples
```

---

|              |                     |
|--------------|---------------------|
| tag_features | <i>Tag features</i> |
|--------------|---------------------|

---

Description

Tag features

Usage

```
tag_features(
  object,
  keyvar,
  sep,
  features,
  tagvar = get_name_in_parent(features),
  verbose = TRUE
)
```

Arguments

|          |                                     |
|----------|-------------------------------------|
| object   | SummarizedExperiment                |
| keyvar   | string : intersection fvar          |
| sep      | string : keyvar collapse separator  |
| features | character vector : intersection set |
| tagvar   | string :                            |
| verbose  | TRUE or FALSE                       |

Value

SummarizedExperiment

Examples

```
file <- system.file('extdata/atkin.somascan.adat', package = 'autonomics')
object <- read_somascan(file)
features <- AnnotationDbi::keys(org.Hs.eg.db::org.Hs.eg.db, keytype = 'SYMBOL')
object %<>% tag_features(keyvar = 'EntrezGeneSymbol', sep = ' ', features)
table(fdt(object)$features)
```

---

|                 |                        |
|-----------------|------------------------|
| tag_hdlproteins | <i>Tag hdlproteins</i> |
|-----------------|------------------------|

---

Description

Tag hdlproteins

Usage

```
tag_hdlproteins(object, verbose = TRUE)
```

Arguments

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| verbose | TRUE or FALSE        |

Value

SummarizedExperiment

Examples

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
object %<>% tag_hdlproteins()
fdt(object)
```

Description

Annotation Maps

**Usage**

TAXON\_TO\_ORGNAME  
  
ABBREV\_TO\_ORGNAME  
  
REVIEWED\_TO\_NUMBER  
  
EXISTENCE\_TO\_NUMBER

**Format**

An object of class character of length 7.  
An object of class character of length 4.  
An object of class character of length 2.  
An object of class numeric of length 4.

**Examples**

```
TAXON_TO_ORGNAME[ '9606' ]  
ABBREV_TO_ORGNAME[ 'HSA' ]  
REVIEWED_TO_NUMBER[ 'reviewed' ]  
EXISTENCE_TO_NUMBER[ 'Evidence at protein level' ]
```

|---------|------------------------|

---

**Description**

Get/Set weight matrix

**Usage**

```
weights(object, ...)

## S4 method for signature 'SummarizedExperiment'
weights(object)

weights(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
weights(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
weights(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,NULL'
weights(object) <- value
```

**Arguments**

|        |                                   |
|--------|-----------------------------------|
| object | SummarizedExperiment              |
| ...    | additional params                 |
| value  | ratio matrix (features x samples) |

**Value**

weight matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.rnaseq_counts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
weights(object)[1:3, 1:2]
weights(object) <- 1
weights(object)[1:3, 1:2]
```

---

|          |                     |
|----------|---------------------|
| write_xl | <i>Write xl/ods</i> |
|----------|---------------------|

---

**Description**

Write xl/ods

**Usage**

```
write_xl(
  object,
  xlfile,
  fitcoefs = autonomics::fitcoefs(object),
  verbose = TRUE
)

write_ods(
  object,
  odsfile,
  fitcoefs = autonomics::fitcoefs(object),
  verbose = TRUE
)
```

**Arguments**

|          |                      |
|----------|----------------------|
| object   | SummarizedExperiment |
| xlfile   | file                 |
| fitcoefs | character vector     |
| verbose  | TRUE or FALSE        |
| odsfile  | file                 |

**Value**

filepath

Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file, fit = 'limma')
xlfile <- file.path(tempdir(), 'fukuda20.proteingroups.fdt.xlsx')
odsfile <- file.path(tempdir(), 'fukuda20.proteingroups.fdt.ods')
# write_xl(object, xlfile)
# write_ods(object, odsfile)
```

---

|   |                               |
|---|-------------------------------|
| X | <i>Model based prediction</i> |
|---|-------------------------------|

---

Description

Model based prediction

Usage

```
X(
  object,
  formula = default_formula(object),
  drop = varlevels_dont_clash(object, all.vars(formula)),
  codingfun = contr.treatment.explicit
)

beta(object, fit = fits(object)[1])
```

Arguments

|           |                                    |
|-----------|------------------------------------|
| object    | SummarizedExperiment or data.frame |
| formula   | formula                            |
| drop      | TRUE or FALSE                      |
| codingfun | function                           |
| fit       | 'limma', 'lm', 'lme', 'wilcoxon'   |

Value

beta matrix (nlevel x nfeature)

Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% fit_limma(block = 'Subject') # intercept required!
beta(object) # betas : nlevel x nfeature
X(object) # design : nlevel x nlevel
X(object) %*% beta(object) # response : nlevel x nfeature
```

---

|            |                                        |
|------------|----------------------------------------|
| zero_to_na | <i>Change nondetect representation</i> |
|------------|----------------------------------------|

---

**Description**

Change nondetect representation

**Usage**

```
zero_to_na(x, verbose = FALSE)
nan_to_na(x, verbose = FALSE)
na_to_zero(x, verbose = FALSE)
inf_to_na(x, verbose = FALSE)
minusinf_to_na(x, verbose = FALSE)
na_to_string(x)
```

**Arguments**

|         |            |
|---------|------------|
| x       | matrix     |
| verbose | logical(1) |

**Value**

Updated matrix

**Examples**

```
matrix(c(0, 7), nrow=1)
matrix(c(0, 7), nrow=1) %>% zero_to_na(verbose=TRUE)

matrix(c(NA, 7), nrow=1)
matrix(c(NA, 7), nrow=1) %>% na_to_zero(verbose=TRUE)

matrix(c(NaN, 7), nrow=1)
matrix(c(NaN, 7), nrow=1) %>% nan_to_na(verbose=TRUE)

matrix(c(Inf, 7), nrow=1)
matrix(c(Inf, 7), nrow=1) %>% inf_to_na(verbose=TRUE)

matrix(c(-Inf, 7), nrow=1)
matrix(c(-Inf, 7), nrow=1) %>% minusinf_to_na(verbose=TRUE)
```
